LACOMBE LOSES BOTH EXHIBITION HOCKEY GAMES

In an evenly contested game on Saturday night Red Deer managed to claim the majority of three goals, which were all scored in the dying minutes of the game, the final result ending Red Deer 2 Lacombe 1. Lacombe got the first with only three minutes to go when Duke McGregor banged in the rebound from George Broak's shot. Red Deer's tallies followed in quick succession, Lee and Sutherland scoring.

Apart from the first period which was slow and ragged a good fast brand of hockey was dished out for so early in the season and is an indication that good fast games can be looked forward to throughout the winter. Lacombe tried several forward formations in an effort to get two good clicking lines. This will be a difficult task for the selection committee as all players showed up to good advantage, and frequent changing of players was occasioned, to find out the most effective combinations.

Lineup: Red Deer, Thomas, Croft, Kee, Lee, Burns, Kennedy, Gordon, Sutherland, Mackiwachuk, Cox, and Sinclar.

Lacombe, Craigen, Pears, Hoppus, Penman, Brooks, Simituk, S. Todd, McGregor, Clift, Wilson, Vancheart, Pettit, Mathews, E. Todd.

Lacombe Loses at Red Deer

In a fast high scoring game, Lacombe were on the short end of a 7 to 5 score at Red Deer Tuesday night. Red Deer took the lead 3 times in the first period only to see Lacombe tie it up each time. No goals were scored in the second period but the third produced 8. Lacombe got the first 3 then Red Deer drove in 4 in rapid succession. The game provided 2 fist fights and in all 12 penalties were handed out Lacombe receiving 7 and Red Deer 5

Goal scorers for Red Deer were Lee, Kenedy 2, Croft, Burns, Gordon and Sutherland and for Lacombe, Penman 2, Brooks, Simituk, and McGregor. Mathews, Brooks and Todd each had an assist.

Lineup: Lacombe—Goal, E. Todd, defence, Pettet, Pears, Hoppus, forwards, Brooks, Penman, Todd; McGregor, Simituk, Mathews.

Red Deer—Goal, Thomas; defence, Croft, Kee, Cox; forwards, Kennedy, Lee, Burns, Gordon, Sutherland, Makowichuk, Cornett.

Referee—Clint Richardson, Red Deer.

Children Benefitted By Gifts of Clothing

At the last meeting of the Women's Social Credit Group another large parcel of clothing was made ready for shipment, and letters were read acknowledging the receipt of the two former parcels sent.

Thirty children have in this way benefited very much by the efforts of this group, the parcels being composed of appropriate and substantial colthing.

The officers of the group wish to thank the members and friends who so generously donated to these parcels, especially the Lakeside Canyon Group for their very splendid donation.

The Churches

THE CHURCH OF ENGLAND IN CANADA

St. Cyprian's Church, Lacombe

Diocese of Calgary

Incumbent: The Rev. T. H. Chapman.

Licensed Lay Readers: E. H. Jones, K.C., and A. T. Inskip.

Organist: Miss Alice Inskip.

Friday, 3:45 p.m. Choir Practice.

Dec. 1, 1st Sunday in Advent.

10:00 a.m., Sunday School.

11:00 a.m., Morning Prayer.

7:30 p.m., Evensong.

Saturday, Nov. 30 is St. Andrew's Day. There will be a Corporate Communion at 10 a.m. for the Woman's Auxiliary. All others are, of course quite welcome.

St. John's Church, Clive, 11:00 a.m. Morning Prayer.

St. Jude's Church, Blackfalds, 11:00 a.m. Sunday School, 3:00 p.m. Evening Prayer.

A Bible Class will be organized at 12:30 p.m. on Sunday, Dec. 1st.

The regular monthly meeting of the Vestry will be held at the Adelphi Hotel at 8:30 p.m. on Monday, Dec. 2nd.

ST. ANDREW'S UNITED CHURCH

Rev. R. B. Layton, B.A., B.D., Minister

Services at 11:00 a.m. and 7:30 p.m.

Sunday School at 11:00 a.m.

There is an encouraging increase at both the Sunday School and Public Worship.

Mr. Dwight Powell, B. A., at St. Stephen's College, Edmonton, will preach at both services on Sunday.

The monthly meeting of the Ladies' Guild will be held on Wednesday, election of officers, etc.

BAPTIST CHURCH

Minister, Rev. S. J. Waterman

Sunday at 11:00 a.m., Sunday School and Bible Class.

7:30 p.m., Evening Worship. Subject, "This is Life Eternal."

WAR IS A PAINFUL BUSINESS

One of the thousands of Ethiopian troops to be wounded during the fierce battle of Adowa is shown, TOP, being brought behind his own lines astride a donkey. Back of the lines the Red Cross units set up by the Ethiopians promptly treated the injured. BELOW, a member of the Ethiopian Red Cross tends a cooling drink of water to a wounded trooper.

Junior Hockey Club To Hold Dance Dec. 6

The Lacombe Junior Hockey Club are sponsoring a dance to be held in the Adelphi Hotel, on the night of Dec. 6. The object of this social event is to obtain finances to aid in carrying on the business affairs of the club during the winter season.

The club has some very promising material this winter and it is very desirable that they should have the whole hearted co-operation and backing of the entire community.

Tickets are now on sale by members of the committee and you are urged to arrange your affairs so that you may be able to take in this enjoyable event.

Music will be furnished by Bob Paulson's Orchestra.

SOCIAL CREDIT MEETING

Lacombe Social Credit Group No. 1 held their opening meeting of the season on Monday night with a fair attendance. Mr. Macmillan, M.L.A. has kindly consented to address the next meeting on Dec. 9, to which all the other groups are cordially invited. Arrangements were made for holding a Bridge party at Mrs. Trott's residence on Dec. 6.

CANADIAN LEGION CARD PARTY IS POSTPONED

In order not to interefre with the Benefit Dance being held by the Oddfellows on Friday night, November 29, the Canadian Legion have decided to postpone to a future date the Card Party which had been previously announced for the same date.

There are two families of stinging nettles in Canada—the nettle and the wood nettle. There are five Canadian species of the nettle, two of which are widespread and three are western. The wood nettle is found in Eastern Canada.

Rust Resistant Wheat Not Yet Suitable For Central Alberta Use

This fall, after a summer when black stem rust destroyed a large proportion of the wheat crop on the prairies, a great deal of publicity has been given to the new rust resistant varieties.

In an endeavor to determine their suitability under Central Alberta conditions all of these varieties have been tested for a number of years at the Dominion Experimental Station, Lacombe. Although these new varieties appear to be admirably adapted to the climatic and seasonal conditions of those portions of the wheat belt in Manitoba and Saskatchewan where rust is prevelant, they are too late maturing to make it advisable to grow them in the park belt of Alberta. Most of them are as late or later than Marquis in maturing.

The problem in Central Alberta is altogether different from that of of those areas in the wheat belt which are engaged in a battle to the death against rust. In Central Alberta, where there has never been any appreciable rust damage, the struggle takes the form of a race against frost.

A vast amount of experimental research is being applied to the problem of breeding up new and better varieties of wheat, and doubtless it will not be long before improved early maturing sorts that are both high yielding and rust resistant will be produced; but until such varieties have been made available to the public it will be advisable for the farmers of Central and Northern Alberta—where frost, rather than rust, is the vital problem—to continue growing the earlier-maturing standard varieties.

Around The Town

Matt Burgin has be n admitted to the Lacombe Hospital. He is being attended by Dr. Hynes.

* * *

The regular weekly meeting of the Bridge Club was held Monday evening at the home of Mrs. M. t. Cruickshank, honors going to Mrs. A. M. Frizzell.

* * *

Mrs. (Dr.) Hynes entertained ladies of the Catholic Women's Aid or St. Stephen's Church at Bridge on Tuesday afternoon. The guests included Mesdames Winter, Fitzpatrick, Pearson, Thompson, Christenson, MacIntyre, Sheridan, Hynes and Walker. Honors went to Mrs. T. A. H. Thompson.

* * *

Miss Hazel Trott, nurse in training at the University Hospital, Edmonton spent last week end in Lacombe with her parents, Mr. and Mrs. W. J. Trott.

* * *

Eddie Bruns, Alan McFadden, Austin Danner who are students at the Technical Institute in Calgary spent last week end with their respective parents.

* * *

Stuart Fraser and Jack Berry left last Sunday by motor for the Coast where they will spend two weeks.

* * *

Dr. Hynes was a visitor to Edmonton Tuesday.

Murray McLeod returned recently from Winnipeg where he was visiting his brother, Norman for two weeks.

* * *

Mrs. John McDonald was hostess on Wednesday evening at a charmingly arranged Social in honor of the members of the Senior Choir of St. Andrews United Church.

* * *

Dr. George D. Miesener of the Victoria High School staff Edmonton, spent Sunday with his mother, Mrs. E. L. Miesener.

* * *

Mrs. E. M. Parsons and daughter Pat are leaving this week to spend a holiday in Vancouver with her parents Mr. and Mrs. J. H. Corbett.

* * *

Len M. Paddison celebrated his 24th anniversary since coming to Lacombe on Wednesday. He arrived here Nov. 27, 1911.

* * *

N. G. Elder, Dunc Mitchell and Robert Weyman were business visitors to Lacombe this week.

* * *

Fred Butcher received word from Mr. and Mrs. F. J. Ramsay stating they arrived safely at Walla Walla, Wash.

* * *

The Baptist Ladies' Aid will hold their annual Bazaar, Tea and Sale of Cooking on Saturday, Dec. 30, from 2:30 to 6 p.m., in the Oddfellows' Hall.

Bentley News

Mr. H. E. Balfour, high school inspector, was avisitor at the high school on Thursday last.

Mr. and Mrs. Wm. Surratt were Calgary visitors last week end.

The Stephenson school was closed last week for three days, J. W. Grant, the teacher, being at Edmonton, on business.

Mrs. Wm. Pringle was hostess to the Bentley Ladies' Hospital Auxiliary on Thursday afternoon. A large number of ladies were present and election of officers took place, resulting as follows: President, Mrs. H. Hopkins; vice-president, Mrs. Grace Vanderwoort. The selection of a secretary-treasurer was deferred to a later meeting. Following business lunch was served.

Miss Alma Nathan is the guest of her sister, Nurse Rosine Nathan at Calgary for a couple of weeks.

Mr. H. H. Humman of Lincoln, Neb., arrived here last week. He formerly resided in this district and at one time was the owner of the farm occupied by Mr. A. Leiske at Rainy Creek.

Miss Sibbald of Cluny is visiting her aunts, Mrs. Nathan and Mr. Sam Leiske, and her cousin, Mrs. Fred Renchler.

Mr. and Mrs. Harold Peterson and Mr. and Mrs. R. E. Chowen and little grandaughter Jean were in Edmonton a couple of days last week, the guest of Mrs. Verna Murray and family.

Mrs. C. McDougall was out from Lacombe last week the guest of Mrs. F. W. Thorp.

The Red Deer full time health unit are responsible for a course in home nursing to the girls of the Intermediate and High School. A lesson being given each Tuesday for several by a nurse of the Health Unit staff.

Mrs. W. Whitesell entertained the Sunset W. I. at her home on Thursday last. Mrs. Harold Peterson presented a very instructive and interesting paper on Immigration and Canadianization and Mrs. J. Secular stated that she had found it necessary on account of illness to resign as constituency president. The next meeting will be held at the home of Mrs. J. H. Suggett, Bentley, on Thursday, Dec. 12.

The Independent Order of Unmarried Women of Rainy Creek, Bentley district, planned a surprise shower on Friday afternoon, Nov. 22, at the home of Miss Frances Wyatt, one of their members whose marriage takes place on Nov. 28. About 50 ladies were present. A mock wedding ceremony was staged by members of the order which was followed by the presentation of a large box of parcels to the brides-to-be, after which lunch was served.

Basketball

The Lacombe boys' basketball team defeated the girls' team 50 to 11 in a thrilling match last week. But the score was no resemblance of the play, the girls put up a real fight. Clarence Perkins was top scorer for the boys with 26 points and Gladys Rhind led the girls with 7 points.

Chigwell

Mr. and Mrs. Geo. Chiswell, Harvey and Artise are visiting at the home of Mrs. Chiswell's parents, Mr. and Mrs. Parker at Buck Lake.

Ward Wilson son of Mr. and Mrs. Arthur Wilson is confined to his home on account of sickness.

Mr. and Mrs. O. L. Norris entertained a number of their friends on Sunday.

Among those present were Mr. and Mrs. Harry Gale, Mr. and Mrs. Jack Jaffrays, Mr. and Mrs. Jack Watts, Mr. and Mrs. Chas. Goddard Jr. and family, Mr. and Mrs. F. Hockenhull and family, Mr. and Mrs. Chas. Short and girls, and Mr. Chas Erickson.

Mrs. Bill Soan spent Sunday at the home of her parents, Mr. and Mrs. Geo Hand.

Miss Ruby Miller who has been visiting in the district for the past two weeks is leaving Thursday for her home at Colinton, Alta.

Mrs. Bob Shearrer and Norman visited Tuesday at the Reiter home.

Mr. and Mrs. Cecil Kocher and family from Clive spent Sunday with Mr. and Mrs. Dick Watkins.

Mr. W. Hudd left on Friday last for the North West country on a moose hunt.

Interesting Traveller Pays Visit to Lacombe

Lacombe was visited on Tuesday by an interesting traveller in the person of Jean de Vaudeuil, 68-year-old Belgian, who is travelling around the world, and is now completing his tour of Canada and the United States. After leaving Canada, he says, he is going to Mexico and will then do back to Belgium where he intends to write a book giving a detailed account of his travels.

Leaving the city of Brussels in 1920, "just to see the world", M. Vaudeuil has rambled all over the face of the globe, since that time.

He wears a skull cap tight on his head, and sports a vandyke mous ache and goatee. Regimental insignias and medals adorned his breast, and his clothes have evidently seen better days.

He lost his left arm and leg in a mine explosion in 1916, but in spite of this handicap he managed to make 15 to 20 miles a day in his travels, during which he has filled 64 large scrap books with souvenirs and clippings which he proudly exhibits.

His credentials showed the various countries he has visited.

Rimbey

Mrs. Frank Adams and Mrs. Wm. Adams are the first lady hunters of the Rimbey district to get their share of big game. Mrs. F. Adams dropped a moose and an elk while Mrs. Wm. Adams brought home a moose. The party was camped in the Adams log hunting lodge for two weeks, about 65 miles from Rimbey.

High School Inspector H. E. Balfour of Edmonton and public school inspector W. J. McLean of Red Deer paid Rimbey official visits during the past week.

S. J. Swanson, foreman of the bridge building crew which has been at work in the Rimbey district for some weeks, finished their contracts on Saturday, Nov. 23. Three bridges were placed as follows: One 1 mile west of Symonds school or 4 miles south and one mile west of Rimbey; one 2 miles west of Rimbey; one 2 miles west and one mile north of Rimbey.

Born at St. Paul's Hospital, Rimbey, on Nov. 17, to Mr. and Mrs. Robt. McCullough of the Blindman district, a son, and to Mr. and Mrs. Richard Slack, of the Iola district, a son.

Mrs. James Clark, of Hoadley, who has been receiving treatment in St. Paul's Hospital, Rimbey, for several days, returned to her home Monday.

A party of merrymakers journeyed by truck to the Springdale district on Saturday evening, where they took in the dance held in Liberty Hall. A good time is reported. Others of Rimbey's younger set motored to join in the dancing at Gilby on Saturday evening.

Miss Leila Boxrude had the misfortune to receive severe cuts and bruises to her right knee on Thursday whilst participating in a skiing expedition. The injuries are not serious.

Edmonton Weekly News

By T. B. WINDROSS

EDMONTON, Alta.—Two important events provided the most important news in Edmonton during the past week, one was the meeting of the first Social Credit caucus of members at the Parliament Buildings and the other was the publication of the first interim report of Mr. R. J. Magor, financial expert and adviser to the government on the outlook for balancing the budget. There were other happenings of interest but these two hold the centre of the stage when considered from the standpoint of importance.

The caucus, like all such gatherings of politicians, was held behind closed doors and few leakages of what was going on came through to the outside. It took the form of a get-acquainted meeting more than any other form—a fellowship meeting and not an experience meeting. Definite action was lacking, although a few steps were taken in the direction of forwarding the cause of Social Credit in the constituencies.

All provincial members were present and most of the federal members also. The latter body held a separate committee meeting to consider its own particular program and organization. Federal members of parliament selected their leader for the house at Ottawa, John H. Blackmore, school teacher of Raymond and member for Lethbridge constituency was the choice. P. J. Rowe of Athabaska was chosen deputy leader and Rev. E. G. Hansell was named secretary of the parliamentary group. A. H. Mitchell, M.P. of Medicine Hat was selected for party whip.

Premier Aberhart attended most of the sessions of this committee as did various members of his cabinet. It was announced that the meeting, which was most enthusi-

(Continued on Page Four)

King Gordon, Montreal Speaks at Men's Club

Addressing an audience of over one hundred the Rev. J. King Gordon was the speaker at the Men's Club at the Church Hall on Tuesday night, and was listened to with rapt attention. His address was most eloquent, and he showed a profound knowledge of world economic conditions. Through a special invitation a number of the ladies were present to hear the well known speaker.

After the usual community singing led by Bob Rhind, the general business of the club was dealt with, which included the treasurers report, from G. T. Jackson who reported a small balance on hand, which had been turned over to the new Sec'y-treas. Dr. G. E. Decker.

The president, C. D. Marble after commenting on the splendid attendance called on the Rev. R. B. Layton to introduce the speaker of the evening. In his introduction of the Rev. J. King Gordon, Mr. Layton mentioned the great educational work done in the West by the grandfather of Mr. King Gordon, and he was glad the high ideals were being maintained by the speaker of the evening who had kindly come to Lacombe to address the meeting.

Mr. Gordon had done considerable post graduate work in Europe, and had seen at first hand the social and economic conditions of the world.

The highlights of Mr. Gordon's address whose subject was "The relationship between Christianity and the social condition of the world" covered the perspective he had gained in European countries, and was quite enlightening to his audience.

He said, undoubtedly the social and economic happenings in the world today were most upsetting, and was a direct challenge to religion. He described how two travellers who visited Wales, one of whom was so struck with the poverty and distress he had seen, wrote a book on the desperate and hopeless struggle of the classes.

The founder of Christianity said, "Ye cannot serve God and Mammon" but the trouble with civilization was that it believes it can. Conceivably Jesus was right, which is borne out by the economic crisis in the world today, the speaker stated. People are beginning to see things differently today than they did before 1929. Progress in the last 4 or 5 years has been badly shattered, and he referred to the baby-bo, blare and bright lights of the Chicago World's Fair, and asked did it really demonstrate progress, if so, he would prefer the quietness of the prairie. Science appeared to be building up, what it had to devise ways to break down, said the speaker and cited instances of science talking, when it produced machines which created unemployment by discarding labor, and increasing social problems for civilization. He gave figures of the situation in the United States in 1928, when he stated one million families were living on $100.00 a year for food, 3,000.00 on $300.00 and 13,000,000 on $500.00 which was below the level of existence, and this in a so called prosperous country of 23,000,000 families.

Only in a Christian social order, was it possible to live a complete Christian life.

Society today were seeking the material things of life, which basically contradicts the basis of Christianity, and society would suffer in consequence, as human life should be organized on a basis of mutuality. Why we are in this jam, people are not acting in an intelligent way and thinking for themselves, said Mr. King Gordon.

The world is in a period of transition, and must act quickly, if democracy is to continue, were the concluding remarks of the speaker.

A vote of thanks was passed to Mr. Gordon by J. S. McCormick for his informative address.

Celebrate Fifteenth Anniversary W.M.S. At Spring Valley

In celebration of ten years of Union, and also in observance of the 15th anniversary of the formation of a Women's Missionary Society in Spring Valley, members of that body gathered for a dinner meeting at the home of Mrs. P. Cull, on Thursday. Weather conditions kept many away, but it was hoped that interest was created among the several visitors who attended. Following a delicious dinner, a splendid talk on the organization, and work of the W.M.S. including the needs of the work and the state of the finances, was given by Mrs. R. Hainsworth, Presbyterial President. Others assisting in the program were Mr. P. Cull and Mrs. P. A. Rainforth, past president.

Six Rinks Entered For Ladies' Curling

An enthusiastic meeting of ladies who contemplate curling this season was held at the home of Mrs. N. E. Carruthers on Tuesday evening. Officers were elected as follows: Honorary President, Mrs. George Doherty, President, Mrs. David Hay, Vice-President, Miss Lila Harrington, Secretary-treasurer Miss Opal Danner. Draw Committee: Mrs. W. W. Mills. Six rinks are already entered and prospects are that there will be a number more. The ice is nearly in shape and with right weather conditions curling will probably begin the end of this week. All ladies wishing to curl will please hand their names to the secretary.

WORLD HAPPENINGS BRIEFLY TOLD

Revision of the Treaty of Versailles means war, Winston Churchill, former chancellor of the exchequer, warned Britain.

Eleven members of the crew of the Soviet tanker Sovnarko were killed in an explosion while the tanker was loading petroleum at Kransovdsk.

Discovery of a method for manufacturing a commercially adaptable gas from ordinary clover was claimed for two students of St. Paul by Dean R. U. Jones, head of the MacAlester College chemistry department.

Vast public granaries are to be established all over Hopei province in China, to insure the 35,080,000 people against famine. The province has been districted, according to population, and the granaries must hold reserves based on population.

Political union of Nova Scotia, New Brunswick and Prince Edward Island, with Halifax as the capital of the maritime provinces, was advocated by J. Newton Harvey, Vancouver business man, in an address at Halifax.

Algoma wolves have started to pester lighthouse keepers on Lake Superior, states G. N. McDonald, keeper of the light on Parisiene island. Wolves are plentiful on the island and are killing off chickens in large numbers, he said.

T. D. LeMay, Toronto planning commissioner, reported to the board of control that economic loss to Toronto through death and injury resulting from motor accidents last year was $8,500,000. He recommended a traffic school be set up for all pupils more than 15 years old.

An ancient Ethiopian superstition —"Thou shalt sell no milk"—is preventing milk purchases from natives by the Italian army in Northern Ethiopia. The natives have a century-old belief if they sell milk their cows will die. Foreigners wanting milk, therefore, are buying the cows outright.

Byng Of Vimy

Estate Bequeathed By Former Governor-General Of Canada

The late Viscount Byng of Vimy, governor-general of Canada from 1921 to 1926, left an estate with the gross value of $155,000, it was learned in London.

He bequeathed his field-marshal's baton to his old regiment, the 10th Royal Hussars, which he joined in 1883 and commanded from 1902 to 1904.

To Lady Byng he left $25,000 and the income for life from the residue of the estate, except for certain legacies to his servants.

After the Great War, Lord Byng was thanked by parliament for distinguished service and granted 150,000. He had commanded the Canadian corps in 1916-17 and the third army from 1917 to 1919.

Germany Needs Milkmaids

Newspaper Suggests City Girls Be Sent To Country

Too many "frauleins are sitting behind typewriters and too few behind glistening milk pails," the newspaper Tageblatt said in a discussion of Germany's butter shortage. The shortage, the article said, is due in large extent to a "milkmaid shortage." Too few persons in Germany know how to milk cows, said the writer, in suggesting more city girls be sent to the country.

Village For Sale

The entire village of Weierhof, Germany, is to be placed on sale by the public receiver. A few years ago the 40 persons living by weaving, formed a co-operative society. The officials absconded, leaving debts of $50,000. Creditors have obtained a court order for the sale of all lands, houses and goods in the village.

The ancients made mayonnaise as early as 14 A.D. It is found mentioned in 487 recipes by a gourmet of that time.

The famous Gutenberg Bible is still preserved in 41 original copies. Each copy is valued at approximately $100,000.

Dominion Housing Act

Expected To Accelerate Building Operations Next Spring

Operations under the Dominion Housing Act passed at the last session of parliament, have been going forward without interruption under the new government. Whether there will be any change has not been decided. Finance Minister Dunning, who has jurisdiction over this legislation, said he had examined the statute but had not time to give it detailed study.

While no figures have been made public to indicate the extent to which the housing loans have been taken up by prospective home owners, it is known that many applications have been received.

Provisions of the act make it possible for any Canadian desiring to build residential property to secure a loan at low cost for a term as long as 20 years under easy repayment plans, with the government bearing the major risk.

In the statute as passed last year the housing fund was fixed at $10,000,000 which would mean, if it were all taken up, $50,000,000 of building operations. Since the act has been in operation only a short time the resultant building this year will be light but finance department officials said there was every reason to believe the original appropriation would be pretty well taken up when building gets underway next spring and summer.

Trying Out New Craft

Hydrofoil Expected To Attain Speed Of 150 M.P.H.

One of the strangest crafts ever seen in the Detroit river, a "hydrofoil", which the owner hopes will be capable of a speed of 150 miles an hour, is undergoing preliminary tests.

The boat was designed and constructed by Edward Evans on principles first outlined by Alexander Graham Bell. Evans said that if the hydrofoil's performance came up to his expectations he would seek to enter it as one of the United States boats defending the Harmsworth speedboat trophy.

The unusual-appearing craft is equipped with outriggers, with a step arrangement on their underwater surfaces which Evans contends lift the boat as the speed is increased, greatly lessening "skin friction," and permitting higher top speeds than in conventional design.

Preliminary tests were conducted secretly and the results were not announced, but shore observers said the hydrofoil seemed to rise out of the water even at the moderate speeds at which it was driven with its 650 horsepower engine turning over relatively slowly.

Results Were Astonishing

Finger Prints Of Monkey Identical With Human Prints

"Jimmy," the orang-outang at the Zoo in Melbourne, Australia, showed criminal cunning when his finger prints were taken recently by the police. After the second impression had been made he seized the inked board and finger-print slip, ate the slip and took the board to his den. The experiment, however, yielded astounding results for the police files. It was found that the monkey's finger-prints were identical with human prints. Even experts could see no difference at first glance. A Sydney palmist has gone one step further and has taken a print of the whole palm of an orang-outang in Sydney's Zoo. He describes the animal from the reading, as "benign and friendly, not hostile to man, and angered only by its natural enemy, the lion."

Discover Cave Of Mummies

Believed To Be Living About 1,000 Years Ago

In limestone caves of the coastal mountains of New Guinea rows of mummies of men, their chins on their hands, their elbows on their knees, have just been discovered. They are believed to be 1,000 years old. The caves are near the strip of coast administered by the Australian Government. Almost at the time of the discovery a party of explorers stumbled on a valley populated by a hitherto unknown pastoral people who had dwelt there when the mummies were living men. Until the mummies were found there was no evidence that New Guinea tribes preserved their dead.

Half And Half

Said the chairman of a certain society at its annual meeting: "In most kindred associations, half the committee does all the work, whilst the other half does nothing. I am pleased to place on record that in the society over which I have the honor to preside it is just the reverse."

Of German invention is a projector that shows in magnified form on a screen anything written or drawn by a lecturer on a horizontal sheet of cellophane.

The geographic centre of Montana is in the kitchen sink of a doctor in Lewistown, according to Montana state surveyors.

Garden lovers are reviving interest in "old" roses that were grown in gardens before the modern hybrids were developed. 2124

Famous Downing Street

Was Named After Man Who Once Owned The Property

Officially the most famous address in the world, No. 10 Downing street, London, is the official residence of the first lord of the British treasury. Usually the prime minister holds that office. It thus became the latter's dwelling place and represents the government in power. Actually it is a very unpretentious brick facade in a dowdy one-way, narrow street off the famous Whitehall. The unassuming exterior in no way encourages visitors to visualize the tremendous decisions made there for Britain and the world in the past two centuries. Sir Robert Walpole first went into residence at No. 10 Downing street in September 1735.

Strangely enough the name is connected with early Massachusetts and Harvard. George Downing, whose name is borne by the street once owned the land there, indeed the family did not sell the property out until 1820. Charles II. gave Sir George Downing this land for services as a diplomat under the Stuarts. It was a reward to a favorite. Downing was a nephew of John Winthrop, first governor of Massachusetts. Downing was a member of the first graduating class at Harvard in 1642. That university at Cambridge was formed in 1636. Sir George's mother sent him to England where he took sides in the Civil War and was Cromwell's ambassador to The Hague. He learned diplomacy so well or bargained with the Dutch so cleverly that when the parliamentarians were deleted Downing served the Stuarts. Now, however, the street is better known than the man after whose estate it was named.—Brandon Sun.

Air Marriages Illegal

Couple Must Have Third Ceremony Rules Highest Ecclesiastical Authorities

Though previously they had gone through a civil ceremony on the ground, the bride and bridegroom, who were married while flying in an airplane over Paris, recently, are not as yet, in the eyes of the Church, man and wife. They must go through a third ceremony, the highest ecclesiastical authority in Paris, has made this ruling on the grounds that the priest in the plane did not obtain special authorization. Had the couple attempted air marriage in England they would have found the same trouble. Dr. P. Dearmer, Canon of Westminster, said: "Marriages in airplanes would not be considered legal in England. People must be married in churches or chapels that have been consecrated by the Church of England or in Nonconformist places of worship licensed for marriages."

Largest Oil Producer

Pitch Lake On Trinidad Is One Of World's Outstanding Natural Phenomena

The island of Trinidad, in the eastern group of the British West Indies, is the largest producer of crude oil in the British Empire, the output for 1934 being 10,894,363 barrels, an increase of 770,000 over the record figure of 1932. Asphalt, which is obtained from Pitch Lake, one of the world's outstanding natural phenomena and visited by tourists from all parts of the world, also shows increased production, 55,992 tons being exported last year as compared with 51,900 tons during 1933. During the past 50 years 5,000,000 tons of asphalt have been taken from this lake and there are many more millions of tons in sight. The level of the lake during this time has fallen 20 feet.

Undesirable Beggars

South African City Would Pay For Having Them Removed

Residents of Ladysmith, South Africa, have offered to pay $5 a year each if the authorities will guarantee to rid it of human monstrosities that are settling in the city to become professional beggars. Among the undesirables are a deaf mute with withered legs, who crawls all over the streets, a man with elephantiasis of the ears, whose lobes dangle at his waist, a brass man, who steals every shining object he can lay his hands on and hangs it all on his tattered clothes, and a full quota of blind and crippled. These unfortunates who are all natives, have drifted into Ladysmith from other centres. Unable to earn their living, they take to begging from merchants.

Believed In Advertising

George Weston, the founder of the Weston Biscuit Company in Toronto, and the builder of the Canada Bread Company, said, "From the day I took the greatest pleasure in paying my advertising bill the very morning it reached me, from that day I began to know I was getting rich!" And when that bill grew large so grew the business of making his homemade loaf.

HAVE YOU Digestive Troubles?

Mr. W. J. Fisher, 208 Hunter St. W., Hamilton, Ont., said: "I suffered from catarrh of the stomach, could eat but very little and that would cause distress. I grew weaker daily and had headache almost constantly. I became very much discouraged. After taking Dr. Pierce's Golden Medical Discovery I was able to eat, gained in weight and resumed my work." All druggists.

New Map Of Canada

Much Detail Shown In New Map Published By Department Of Interior

The Topographical and Air Survey Bureau, Department of the Interior, Ottawa, has just issued a new map of Canada on the scale of 100 miles to one inch which will be found of interest to all those persons who have use for a small scale map of the Dominion.

The best map of Canada printed by the Department of the Interior is published on the scale of 35 miles to one inch in four separate sheets which, when joined together, cover a space about 4½ feet by 8½ feet, making an excellent wall map if one has such a space available. There is another map of intermediate size on the scale of 60 miles to one inch which is very convenient for desk use or as a smaller wall map.

The new map has been produced to meet the demand for a smaller map of handy size, useful for general reference purposes. It is 25 inches by 36 inches and fits into any large size drawer or a small space on the wall. This map shows all of Canada south of latitude 75, thus including all but some of the northern islands. All the larger physical features, such as lakes, rivers, bays, and islands, are depicted in correct position. The boundaries of the provinces and districts are outlined. All cities and towns are shown and all the railways are drawn in, but without the intermediate small stations being named. The latitude and longitude lines are drawn and from them it may be seen that southern Ontario lies in the same latitude as Boston, while the southernmost tip of the Ontario peninsula is as far south as the northern end of the state of California.

According to the latest figures, the land and fresh water area of Canada, according to provinces and territories, is given in the following table:

	Square Miles
Prince Edward Island	2,184
Nova Scotia	21,068
New Brunswick	27,985
Quebec	594,534
Ontario	412,582
Manitoba	246,512
Saskatchewan	251,700
Alberta	255,285
British Columbia	366,255
Yukon Territory	207,076
Northwest Territories	1,309,682
	3,694,863

Lake Superior is the largest lake shown on the map. It and Lake Huron, Erie, and Ontario, lie between Ontario and the United States. Of the lakes lying wholly within Canadian territory, Great Bear Lake is the largest with an expanse of 11,-660 square miles. Other large lakes over 1,000 square miles in area include Great Slave, Winnipeg, Athabaska, Winnipegosis, Manitoba, Nipigon, Reindeer and Dubawnt, La Martre, and Lake of the Woods.

Mount Logan is the highest mountain in Canada, with an altitude of 19,850 feet. In addition to it there are 66 other mountain peaks above 11,000 feet in height.

Copies of this map may be obtained from the Surveyor General, Department of the Interior, Ottawa, for 25 cents per copy. As it is a useful school map, one copy will be supplied free to any school for official use, upon application of the teacher or school board.

Baby Linguist

Latest candidate for child prodigy is 17-month-old Carolyn Kutler, of Omaha, who has a stock of 200 words. In addition to speaking English, Carolyn also chats with her grandmother in Jewish.

A sliding top for tooth paste tubes has been devised to replace small caps that have to be screwed on.

Manchukuo is to have its own "brain trust."

Synthetic Gasoline

Britain Producing Petrol From Coal, Air And Water

Formal opening by Right Hon. Ramsay MacDonald a few days ago of a plant to manufacture gasoline from coal, air and water is a reminder that the British Empire lacks raw cotton and mineral oil—and this is about all—for economic self-containment. Wartime exigencies started the development of cotton plantations, with a present prospect that requirements can be met, ultimately, from colonies in the Pacific, in Africa and elsewhere, besides India and Australia.

The vast coal supplies of the United Kingdom are now being used in an introductory way for the production of gasoline. It is estimated that the newly-established plant will turn out 100,000 tons of "gas" yearly from 400,000 tons of coal. For the consumer it is not an economical undertaking. The cost of imported gasoline, laid down, is said to vary from 2½ to 4 pence, while the synthetic gasoline costs not less than 7 pence per gallon. To the British government the situation seemed urgent enough to warrant a guarantee of protection from competition. Added to this is the expectation—at least the hope—that the chemical genius which overcame obstacles will in time find a way to lower costs.

The innovation is regarded as a bright light for the coal industry, which has languished for years, and thus an offset to some extent to the cost imposed on gasoline users. It is one step in the progress made in the United Kingdom to find employment for a discontented army of idle people, which, along with the probable assurance of a home supply of oil, is regarded as justifying the heavy investment involved and the additional taxation.—Toronto Globe.

Will Send Petition

Women Of Empire Would Safeguard Nationality Of Those Who Marry Foreigners

An appeal to the king is to be made in the new year by women from all parts of the empire to safeguard the nationality of women who marry foreigners.

Organized by the Women's Freedom League, the petition will request the king "to ask the governments in the United Kingdom and each of the dominions to consent to the adoption of uniform legislation to give the married women independent nationality in her own person, in the same terms as a man or single woman."

In July a petition was presented in the House of Commons signed by women's societies in every dominion, asking the government to remove the disabilities of married women in matters of nationality.

Manufactures Gold

Denver Man Claims To Have Discovered Method

William H. Hendrick, 26, told district attorney Thomas J. Morrissey of Denver, he had discovered the secret of manufacturing gold—and submitted some gold to prove it.

"I made this gold myself. I have a secret process. I know how to make gold or any other metal out of its subatomic constituents," he told the amazed prosecutor after the latter had examined a small pile of gold dust turned into the Denver mint by Hendrick.

"It costs more to produce than the metal is worth, even at the new price of $34 an ounce," he said.

Freddie—"It's all bunk about the Irish being such good fighters."

Marie—"Is that so?"

Freddie—"Yes. The other day my brother and I and three other fellows almost knocked an Irishman silly."

This Knit Dress is Slim and Smart

Household Arts by Alice Brooks

You'll Find the Work Goes Fast

PATTERN 5479

A trim little stand-up collar and a row of buttons marching down your chest show the important "military influence" in this smart one-piece knit dress. The V-shaped yoke and bloused sleeves are knit in a combination of ribbing and a lovely lacy stitch, while the rest is, as you see, plain knitting and quickly done. This pattern may also serve for a blouse or three-quarter tunic.

In pattern 5479 you will find complete instructions for making the dress in sizes 16-18 and 38-40; illustrations of it and of all stitches used; material requirements.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Debt Adjustment Act

Law Regulating Disposal Of 1935 Saskatchewan Crop

(Hon. T. C. Davis, Attorney-General)

(Continued From Last Week)

"Let me stress the fact that these exemptions apply only where a seizure is being made under Writ of Execution issued under a Judgment obtained through the courts and do not apply in respect of other seizures in connection with which the absolute control of the situation is in the Debt Adjustment Board, which, of course, decides each case upon the merits of the case.

"Fourth: In connection with the repossession of farm implements, it is to be noted that a very material change was made in the Law of Saskatchewan in the year 1933 when it was provided that the right of a person, selling a farm implement, to recover the purchase price thereof was restricted to repossession of the article sold. This does not apply to implements where the value is less than $100.00, or to binders, but, in connection with every other implement sold, since that law came into effect, the farmer who purchases it cannot be forced to pay for the same, and the remedy of the seller of the machine is restricted to the return of the article sold. This naturally puts the seller of a machine, sold under this law, in a different position than one who sold under the law as it formerly was; under the old law the seller had the promise of the purchaser to pay for the machine; under this law there is no enforceable obligation to pay. The seller being limited to the return of the article he sold, naturally, is interested in seeing that the value of his machine is not depreciated through use without any payment for the use of it.

"The Debt Adjustment Act applies to contracts made prior to April 1st, 1933, and no repossession can be made of a machine purchased prior to that date without notice to the Board.

"Fifth: In conclusion, let me say, the government has been asked to state the general policy of the government in the matter of collections. In this connection I would say that first of all, that before any person can make a seizure of any kind, the person who makes the seizure must before taking any step at all, give thirty days notice, under the Debt Adjustment Act, of his intention to make a seizure. There are only two exceptions to this, viz., a municipality can seize for taxes without notice and a seizure can be made in urban communities for rent without notice, but in the case of seizures for rent, no sale can take place without the Debt Adjustment Board being consulted. Furthermore, in the case of municipalities, the Debt Adjustment Board has power to intervene. The government, as a matter of general policy, is highly desirous that business in Saskatchewan get back into ordinary business channels as rapidly as possible and that ordinary business relationship between individuals in the province be resumed as soon as possible without interference on the part of the government or of municipalities either by way of furnishing assistance, guaranteeing payments or otherwise, and as a first step towards this objective, the government feels that the people of the province should, as rapidly as possible, get on a self-sustaining basis.

"During the last few years, owing to drought conditions and an absolute failure of production in a large section of the agricultural portion of the province, it has been absolutely impossible for the people therein to maintain themselves, and assistance had to be given to them by both the province and the municipalities which, in turn, were assisted by the government of Canada.

"In many sections of the province, for the first time in many years, the people therein are harvesting a crop this year, and after harvesting expenses are paid from the crop, it is highly desirable in the interests of all concerned that the farmer or producer provide for his seed and feed requirements and for his seeding operations in 1936 and also provide for the maintenance of himself and his family until next harvest, and wherever in Saskatchewan crop conditions are such that the farmer is able to do this from the proceeds of his crop, then the government will expect him to do it, and seeks the co-operation of all classes, creditor and debtor alike, to secure this desirable end.

"Where the farmer has a surplus over and above his own requirements, for the purposes which I have mentioned, then the farmer should to the fullest possible extent improve his own credit by taking care of his obligations in order that by so doing he may at the earliest possible date re-establish his credit and thereby enable him to purchase his own necessities.

"In the meantime, the government will refrain from pressing for payment of debts due by individuals to it for direct relief this year in order to assist in re-establishing the credit of the individual, all towards the objective of getting business back into normal channels again.

"I am sure that municipalities, creditors and every person will be interested in attaining these ends, and I am sure will co-operate with the government to the fullest extent in trying to reach this condition.

"If any difficulty arises which may interfere with the producer protecting himself and his family to this extent, then the facilities of the Debt Adjustment Board are available to him to assist him in carrying out this intention.

"As I stated at the beginning, a representative of the Debt Adjustment Board is to be found at the judicial centre in each judicial district in the province and he is there to serve the people of this province and to do so free of charge."

Could Handle The Job

Pedro, the lion tamer, was unable to appear at the circus one night, so his wife applied for the job.

"Do you think you can manage the animals?" asked the circus proprietor.

"Did Pedro manage them all right?" she asked.

"Most successfully."

"Well, that's all right, then. I can manage Pedro."

There is no shell on a shark's egg. The covering is leathery and as elastic as India rubber.

It's NERVES! Strengthen Them!

If you find yourself getting upset at trifles, or worrying yourself sleepless—if your appetite is gone and your temper is frayed thin—its NERVES!

They need soothing, strengthening, rebuilding . . . and there's nothing like PHOSFERINE, the great British Tonic, for doing just that.

PHOSFERINE is a concentrated body builder. You take just a few, thin, economical drops each day. And those drops work splendidly.

Right from the start PHOSFERINE makes you feel better. It gives you a new confidence—a new springiness to your step, a new sense of fitness.

That's because PHOSFERINE soothes your nerves and feeds your body so that you sleep like a top and eat like a schoolboy.

PHOSFERINE is splendidly effective at all ages for combatting fatigue, sleeplessness, general debility, retarded convalescence, nerves, anaemic condition, indigestion, rheumatism, pains, neuralgia, neuritis and loss of appetite.

Get PHOSFERINE from your druggist now—in liquid or tablet form—at the following reduced prices:—3 sizes, 50c, $1.00, $1.50. The $1.00 size is nearly four times the 50c size, and the $1.50 size is twice the $1.00 size. 51

Freedom Of Thought

Thinks University Professors Should Enjoy Latitude In Their Work

Defence of freedom of thought and expression by university professors was voiced by Sir Robert Falconer, former president of the University of Toronto, in addressing a University of Manitoba gathering in Winnipeg.

Sir Robert drew attention to the curbing of freedom of learning in universities under the Fascist and Nazi regimes. A tendency in this direction was noticeable in Anglo-Saxon countries because many suspected universities of being lounging places for restless professors harboring subversive thoughts.

Simply because a professor did not think like the majority of men on a certain question was no reason why his opinion should be stifled, said Sir Robert. He said many professors were "far too radical for me" but he was eager that they continue to enjoy freedom in their work.

Want Naturalization

Many Are Seeking To Obtain Citizenship Papers In Alberta

Premier Aberhart's Social Credit scheme was assigned by government officials as the reason for a deluge of applications from Alberta for naturalization. Desirous of taking every precaution to become eligible for the promised $25 per month, applicants are seeking Canadian citizenship in the last three months total two and one-half times more than those for the corresponding period in 1934.

Indicative of the increases, applications from several major districts in the province for August, September and October, with figures for the similar period last year in brackets, total: Edmonton, 466 (152); Camrose, 70 (33); and Calgary, 154 (62).

Excused From Jury Duty

Shopman Had Good Reason For Not Wanting To Serve

A Union Pacific shopman had been drawn on a federal grand jury, and didn't want to serve. When his name was called, he asked Judge Pollock in Topeka, Kansas, says the Capital, to excuse him. "We are very busy at the shops," said he, "and I ought to be there."

"So you are one of those men who think the Union Pacific couldn't get along without you," remarked the judge.

"No, your honor," said the shopman. "I know it could get along without me, but I don't want it to find out."

"Excused," said the judge.

World's Super Timepiece

Impossible For This Clock To Lose Or Gain

A clock that will not lose or gain more than a fraction of a second in a year is to be installed at the Royal Observatory, London, Eng. It will be recognized as the world's super timepiece.

Controlled by electricity, its pendulum will swing in a partial vacuum at a constant temperature, and a series of electric impulses will be given out each time the pendulum swings.

The electric impulses will control the dials and mechanism.

The wrong side of every question isn't always the one supported by your opponents. They may sometimes be right.

The Modern Oxford Bible is said to be the only book in the world that does not contain a typographical error.

STOPS ITCHING
In One Minute

For quick relief from the itching of pimples, blotches, eczema, rashes and other skin eruptions, apply Dr. Deals' pure, cooling, liquid, antiseptic D. D. D. Prescription. Thirty years' world-wide success. Its gentle oils soothe the irritated and inflamed skin, thus aiding nature itself to heal the disorder. No fuss—no muss. Clear, greaseless and stainless—dries up almost immediately. Stops the most intense itching instantly. Try D. D. D. now. A 35c trial bottle, at drug stores, will prove it—or money back. D. D. D. Prescription is made by the owners of ITALIAN BALM.

Find Out

From Your Doctor if the "Pain" Remedy You Take Is Safe.

Don't Entrust Your Own or Your Family's Well - Being to Unknown Preparations

BEFORE you take any preparation you don't know all about, for the relief of headaches; or the pains of rheumatism, neuritis or neuralgia, ask your doctor what he thinks about it — in comparison with "Aspirin."

We say this because, before the discovery of "Aspirin," most so-called "pain" remedies were advised against by physicians as being bad for the stomach; or, often, for the heart. And the discovery of "Aspirin" largely changed medical practice.

Countless thousands of people who have taken "Aspirin" year in and out without ill effect, have proved that the medical findings about its safety were correct.

Remember this: "Aspirin" is rated *among the fastest methods yet discovered* for the relief of headaches and all common pains . . . and *safe* for the average person to take regularly.

"Aspirin" Tablets are made in Canada. "Aspirin" is the registered trade-mark of the Bayer Company, Limited. Look for the name Bayer in the form of a cross on every tablet.

"The Unknown Port", Etc.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he had, and his family is faced with the necessity of a simpler mode of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge.

Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and misses the path Aurora Tubbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him which way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Mark Adam tells Nancy that his brother Luke has broken his leg, and that Jack Nelson has been hired to help out while Luke's leg gets better. With Jack away, Nancy finds that she is lonesome, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nance writes home to get her parents to send all the books they could spare and all they could induce others to let them have.

Nancy's parents and friends gave their liberal support to her request for books, and a sizeable box arrived in due course. Father Adam painted a sign for the library, and the Adam boys worked on the shelves for the books and decorations to make the room look presentable.

Jack Nelson, Matthew Adam, and Nance go to the prairie home of Matthews' uncle for the ride, and after Nance and Jack leave for home, they are caught in a blizzard. Blinded by the swirling snow they collide with a bus full of school children, which was stalled across the road with its back wheels resting in a snow-filled gully. Their car being wrecked, Jack and Nancy stay with the children and do all they can to help. The next morning Jack sets out for help in the blizzard. He succeeds in finding help, and the party of children and Nancy are rescued. As a result of the exposure Nancy's feet are badly frozen and Jack is seriously ill with pneumonia, but both of them recover.

Now Go On With The Story

CHAPTER XXIII—Continued

"It's fortunate they're so much taller than the fence," said Jack. "I suppose they were intended to be imposing; but we can lower them a foot without hurting the appearance of—" (he glanced about to be sure that Cousin Columbine was nowhere near), "of this magnificent property! Fall to, Sis, and get busy with that shovel."

The girl obeyed, rather enjoying the novelty of the task for a little while; but at last she paused, complaining; "I've struck a rock, Jack."

"In this place? More likely it's a bone some dog has buried."

Nancy laughed.

"It was an energetic dog then, or a prehistoric one! My post broke off lower down than yours, Jack, and I've gone a good bit deeper. Perhaps there's enough of a hole here now; but I want to see what this thing is." She lifted the spade, digging for a moment viciously. "It certainly feels like a rock, but—"

Nance ceased abruptly, and dropping flat onto the ground, reached into the new-made hole while her brother watched, a smile of amusement lighting his eyes.

"For the land's sake what are you doin' flat on your stummick in all that dirt?" cried out Aurora, who had drawn near to superintend the work.

"Hunting for buried treasure," Jack answered, grinning. "Pieces of eight, you know. She thinks she's found—"

"I have!" cried Nancy, scrambling up in great excitement. "Give me that crowbar, Jack. I have!"

"What's all this commotion?" demanded Cousin Columbine, who, hearing Nancy's elated voice, had hurried out. "Mercy, child! have you been digging that hole with your two hands?"

Nance laughed, and answered: "It'll all come out in the wash, Cousin Columbine! You see, I've uncovered something down there — something that's evidently been buried for ages. I thought at first it was a rock; but it has sharp corners like a metal box. Did your people ever hide any valuables that way in time of Indian raids?"

The old lady shook her head, and peering into the hole, replied: "Not that I know of. Pry the thing out with your crowbar, Jack, but go gently. It's your sister's property, you know."

"So 'tis," affirmed Aurora. "Findin's keepin's; but if it turns out to be a human skull don't let me see it. I never could abide the sight of bones, Jack Nelson. Even a good fresh soup bone goes against me."

No one paid any attention to this warning, for Jack cried out: "Great Scott! It is a box of some sort! Hold on there, Nance, I'll—"

But his sister was already on the ground, reaching far down to where her discovery lay dislodged. In fact, one and all were on their knees beside her when she drew it forth; a small iron box, almost disintegrated by rust and time.

"Is—is it locked?" questioned Aurora, too utterly amazed to speak with her accustomed shrillness.

Nance shook it cautiously, then with small difficulty raised the cover, disclosing what proved to be a Maltese cross of solid brass suspended from a crucifix carved from some dark stone. As she lifted the relic from its long hiding place, holding it aloft for all to see, a sense of awe held them silent for a moment; then the girl exclaimed in sudden inspiration: "Those Spanish priests! Could—could one of them have lost it, Cousin Columbine?"

The old lady reached out, touching the crucifix with reverent fingers.

"Why not? It may have lain here more than a century. Or perhaps it was captured by hostile Indians, buried for safety and then forgotten. If we find an inscription—even a date, Nancy, it will shed some light on this strange mystery. Carry box and all into the house and we'll examine them."

In this absorbing interest the gate posts were forgotten for an hour; but no clue as to the origin of the sacred relics was discovered; and though Jack dug deeper in the hope that other treasures were buried nearby, his efforts were fruitless.

"What stone is the crucifix carved in?" questioned Nancy, when, the gate posts properly erect at last, the subject was resumed at the dinner table.

"Chalcedony, I think," said Cousin Columbine. "And did you notice the hammer marks and filed edges on the Maltese cross? Hand work, and very, very ancient, if I'm any judge. These things are of real historical value, Nancy. They should be in some museum; but surely you have the right to keep them for the present. In my own mind there's not a doubt that they came from one of the Spanish expeditions. Dear me! what a story we shall have to tell the Adams! Did Mark say what time they would send down for us?"

"Not before five. I have some things to do at the library this afternoon; and I must finish packing so that to-morrow will be free. It gives me a—terrible feeling, Cousin Columbine, to think how soon we're going to leave you."

"And I bet it gives Miss Columbine a worse one," declared Aurora as she thumped an apple pie down on the table. "Pine Ridge won't never be the same again, if you ask me—not that it won't be nicer'n before you came, with the Aladdin Library an' everything. You've had an awful good influence on Juanita, Nancy Nelson, even if you have got her so she wants her dresses darker'n I like on a young girl, or an old one either for that matter. But she's took your advice about goin' to business college come fall, and'll stay with her Aunt Emma down to Colorado City while she learns shorthand. I hope she don't marry some good-for-nothin' feller afterward. No use wastin' money on an education if you're to spend your life over a wash tub."

That afternoon when all but the last-minute packing was accomplished, Nancy slipped into the white sport silk she was to wear at the Adams', and sought the library. It was not "Library Day," but she wanted to finish numbering a second box of books from the Oklahoma family, as well as to write instructions for Mary Taylor; and not wishing to be interrupted, she closed the door. Nance worked slowly, pausing every now and then to look about with that pleasurable sense of accomplishment the little library always gave her; wondering why, when these months in Pine Ridge had gone so well and she was eager to see the family, this horrid homesickness kept creeping over her.

"It must be because Edgemere's so far away," she mused, "and Cousin Columbine hates so to have us go. And there are the Adams! It would be queer. . . ." Nance closed her eyes as if to call up some picture, and her color rose as she said impatiently: "Why don't you face the truth, Nancy Nelson? You just can't bear to leave because. . . ."

The door pushed open.

"Do you mind if I interrupt you for a moment?"

(To Be Continued.)

The Menace Of Fire

Every Minute Property Worth $76 Is Destroyed In Canada

The following article was taken from the Saint John Telegraph-Journal: Forest fire is not the only enemy to be fought. All through the year in city and town and village and the countryside the flames are busy in one place or another, and the loss is heavy. Although it should never be overlooked, this is a particularly opportune time, when the attention of all the people is specially directed to the matter, to consider a statement just issued by the Dominion fire commissioner, who says: "During the past fifteen years, no less than 598,000 fires have taken place in Canada. Property valued at over $610,000,000 has been destroyed and almost 7,000 lives have been sacrificed to the flames. Forty per cent. of those burned to death were boys and girls under 15 years of age. Of the total number of fires, over 300,000 occurred in homes. Every ten minutes, day and night, a fire breaks out somewhere in Canada; every minute property worth $76 is destroyed by fire and, on the average, one person is burned to death and four are seriously injured by fire every day in every year."

New Federal Cabinet

All But Three Of The Members Were Born In Canada

In Premier Mackenzie King's new cabinet the largest religious group adheres to the Roman Catholic communion. Six of the new ministers are Roman Catholics. Presbyterians are represented by three. There are three Baptists, one United Church, one Lutheran and one Anglican.

With the exception of Mr. Dunning, Mr. Mackenzie and Mr. Howe all the members of the new government were born in Canada. Mr. Dunning is English, Mr. Mackenzie a Scotsman, while Mr. Howe was born in the United States.

Bicycles in the United Kingdom outnumber motor vehicles by 10 to 1, the cycling craze being far in excess of that of the '90s.

A NEW SERIAL STORY

Arrangements have been completed for presenting to our readers a new serial entitled **"Fleming's Folly"**, by that well-known writer, Lawrence A. Keating. This is an absorbing and exciting story of the western plains, and those who follow the installments as they appear each week, will be thrilled by the intensive situations. This story will be commenced in an early issue. Be sure that you do not miss the opening chapters.

Explains Phone System

Ratio Of Canadian Messages Per Telephone Is The Highest In The World

When a person speaks into a telephone in his home or office, his voice actually ends at the diaphram on the set. What goes to the person at the other end of the wire are electrical waves which vibrate against the diaphram on the receiving end and reassemble the voice. This was just one of the many things about the "Peculiar Phases of Modern Communication" that Robert L. Stratton of London, district manager of the Bell Telephone Company, told St. Thomas Kiwanians, recently, when he addressed them at their weekly luncheon in the Hotel Empire. In layman's language, Mr. Stratton explained the difference between wireless telephony or radio broadcasting and what is commonly known as the wire system of sending the voice long distances.

It is really a system of wired wireless that people know as long distance telephone communication. The same wireless waves are going out, as in radio, but they follow the wires for guidance. The messages do not travel through the wires—which has been an erroneous idea entertained by so many persons.

The advance in the science of telephony has been so marvelous that one may expect almost anything of the future, Mr. Stratton advised. By the frequency system, an innovation of the last few years, as many as ten different conversations can be sent over the same pair of wires. It is a jumbled mass or hodge-podge of words that goes out. Some are upside down, some sideways. At the other end, those messages are unscrambled by the frequency system, each going to the person for whom it is intended.

In telephoning across the Atlantic Ocean, one's voice is magnified millions of times; then at the other end of that long communication cable, it is reduced to the normal pitch again.

Photographs and signatures are now being sent by telephone across the continent. A person can operate a typewriter in one city and the waves or vibrations will convey the message to a machine in another distant city.

Two great inventions have been largely responsible for the remarkable strides made in telephony in the last 20 years. One is the loading coil, which has made it possible to use small gauge wires for conductors where previously large wires had to be used in heavy traffic; the other is the vacuum tube, which picks up the diminishing electric waves, boosts them and maintains them in continuous flow so that the voice has the same density when the message reaches its destination.

"The vacuum tube has not as yet reached its limitations," said the speaker. "There is no doubt many many more wonderful things will come from that same avenue of research. Television is here, but it is not yet in a commercial state. We may question its value now, but it may surprise us by its uses, just the same as the trans-oceanic telephone service did. The advances in this field of science have been so phenomenal that it is hard to tell what tomorrow may bring forth."

Canadians are great telephone users, Mr. Stratton informed his Kiwanis audience. The ratio of messages per telephone in Canada is the highest in the world. This is probably due to the fact that the flat rate system of charging for service still prevails here, whereas in most of the other countries, including the United States, the meter system obtains. In those countries a flat rate is charged on a maximum of about 90 telephone calls a month. Over the maximum, a charge of about four cents a conversation is made.

Use Television Trucks

Pictures Can Be Sent Over Telephone Wires Or By Radio

Television trucks are giving daily events by television to a growing number of spectators in Berlin. The television truck carries on its roof an ordinary film camera mounted on a hollow pillar as support. The film, as it is exposed, is run through this pillar to a dark-room inside the truck. Specially rapid films have been made which can be developed in 20 seconds and fixed and washed within a minute. While still wet it is passed through the scanning device of the televising machine, which is also mounted in the truck, and the picture is sent by television to the theatre or the broadcasting station. Television pictures of this kind can be sent over telephone wires or by radio, and after the transmission is completed the film can be used for showing in the ordinary way.

So sensitive is nitrogen iodine, one of the world's most "touchy" explosives, that it will go off when touched with a feather.

Production of rayon is steadily increasing in Japan and has reached a monthly output of approximately 4,000,000 pounds.

Approximately seven per cent. more heat from the sun is received by the earth in January than in July.

THIS IS THE WAY TO HAPPINESS

There's nothing—absolutely nothing—to take the place of perfect health as the foundation of a happy life. And no better way for every one to get it than to turn to that famous tonic wine, Wincarnis.

Wincarnis is not a drug. It is simply the purest of fine wine with all the valuable properties of the 2½ lbs. of grapes which go to every bottle, combined with the strengthening elements of beef and guaranteed vitamin malt extracts.

From your first glass of Wincarnis you will feel new vigour stealing through your veins. You will sleep more soundly, wake more refreshed. In a few days you will have forgotten the irritableness of your former half-well state. You will go through the most strenuous day at the top of your form.

Twenty thousand doctors have recommended Wincarnis for nervous disorder, anaemia, debility, and all run-down conditions. Start taking—and *enjoying* — Wincarnis today. Your druggist sells Wincarnis.—Sales Agents: Harold F. Ritchie & Co. Ltd., Toronto.

Paralysis Is Contagious

Recovery From The Disease Is Believed To Produce Immunity

Sixty per cent of Edmonton residents are immune to infantile paralysis, according to the best medical opinion on a dread disease, knowledge of which is still in the transitional stage, it is declared by Dr. R. B. Jenkins, medical health officer.

While some have said that infantile paralysis is not contagious, Dr. Jenkins said, the findings of all recognized authorities make this assertion "sheer nonsense." It has been proven by authorities, he said, that the disease can be spread in food and drink and by human carriers and insects.

In laboratory experiments the disease was spread from monkey to monkey by a stable fly. The virus remained active on house flies for 48 hours.

Knowledge of infantile paralysis is rapidly improving and years ago there were undoubtedly many mild cases not recognized. Even to-day persons said to be carriers might actually be mild cases. Recovery from the disease is believed to produce immunity. No recurring cases are known.

Town Preserved In Peat

Moss Protects Settlement Covering One Acre For 2,500 Years

A moorland settlement of the Slavonic tribe of Old Prussians, dating back at least 2,500 years, has been discovered by an archaelogical expedition from the University of Posen.

The discovery was made on a peninsula on Lake Biskupinskne, near the small town of Znin. The entire settlement covered an area of about one acre. It consists of 15 wooden huts and seven streets, enclosed in a high wall and a palisade.

Owing to the settlement being buried in peat moss, everything was in an excellent state of preservation. Many objects of daily use, such as cooking utensils, tools and a crude wheel, were found in perfect condition.

Other settlements and tombs, probably dating back 3,000 years, have been found in the Baltic provinces, near Kartuzy. The Old Prussians, of whom these are relics, were not ancestors of the present-day Prussians.

A New Bacillus

Moscow Professor Announces New Theory In Connection With Lung Troubles

Dr. V. Drobotko of Kiev Microbiological Institute, Moscow, announced the discovery of a new bacillus which he said may give an entirely different explanation of certain lung alterations thought in the past to be due to pulmonary consumption.

He has named the bacillus "diptheroid," because it resembles the diphtheria bacillus, although it does not produce diphtheria.

The "diptheroid" is now being studied by the institute to determine whether it is responsible for lung alterations.

Cigarettes In Canada

Every time a cigarette is carelessly tossed aside there is a danger of fire. A mathematician will tell you that if all the cigarettes smoked in Canada last year were placed tightly end to end they would encircle the earth at the equator nearly eight times. This is purely academic interest but the fire hazard of 197,000 miles of cigarettes is of very real interest to Mr. and Mrs. Canadian Citizen because it hits where it hurts —right in the pocket.

A maid who recently joined the church was asked how she knew she was converted. She replied, "Because I clean under the rugs."

Rub on — pain goes. Get the new large economy size. Also available in smaller, regular size.

MINARD'S "KING OF PAIN" LINIMENT

Famous War Commander

German "Sea Devil" Says He Never Took A Life During All His Raids

Count Felix von Luckner, whose exploits as commander of the German raider Seeadler earned him the title of "Sea Devil," visited England recently with Countess von Luckner.

During his stay in London the count met British naval officers, including Sir Reginald Hall, who, as chief of the British naval intelligence department during the war years, endeavored to capture the "Sea Devil" while he was raiding British shipping.

Count von Luckner, asked how he managed to evade capture for so long during the war, said: "You see, I was sailing in British, Scandinavian and every other kind of ship. I know what a reputation the British have for chivalry, so I had my 16-year-old boy on board a Norwegian ship dressed as my wife. Then I had a gramophone playing 'Tipperary'. It was really good fun. But never during all my raids did I take a single human life."

The count began his adventures early, for he ran away to Australia when he was 13. There he joined the Salvation Army. In 1903, when he visited England, he was working as an ordinary sailor on a boat which took cargo of clay to Plymouth; 15 years later he became notorious in England, for between the spring and autumn of 1917 he sank ships worth $40,000,000. He captured 17 ships within a few weeks and sank them, but made sure that the crews were safe first.

"You see," he explained, "I have always regarded myself as a citizen of the sea, and when I have come across an enemy ship, those manning her, too, were citizens of the sea."

"Lion Dogs" To Hunt Lions

Hunter And Pack Have Already Accounted For 300

Successful lion hunting, if you believe Giles Goswick, depends on having good "hounds."

Goswick's opinion on anything connected with mountain lions is regarded as gospel in Arizona.

For ten years, Goswick has made his living by killing mountain lions, first as a U.S. biological survey hunter and now as a state-employed predatory game hunter charged with ridding this section of the state of the fierce killers which destroy tens of thousands of dollars worth of livestock each year.

Goswick's pack of "lion dogs" are descended from a hound brought to Arizona 35 years ago by his father. Through successive generations of training, they have lion hunting bred into them.

According to the hunter, he and his pack have killed or captured 300 mountain lions, including a nine-foot male which was believed to be the largest ever killed in the southwest. This particular lion, he said, was trailed for three days by the dogs before they frightened it into a tree.

Food Investigation Board

Carbon Dioxide Storage Good For Both Bacon And Eggs

Twice as many vitamins are contained in apples with rosy skins as in those with green skins.

This is one of the discoveries the food investigation board has made. Another is that the concentration of vitamin C is as great as great in apple peel as in the core.

The board's report for the year also states that some fruits and vegetables wrapped in iodized paper remain free from mould for much longer periods than those wrapped in plain paper. Some varieties of plums and peaches, however, are adversely affected by this treatment and fail to ripen properly.

It has been discovered that the degree of alkalinity of the white of eggs, which rises with age, can be kept down to that found in fresh eggs by storage in air enriched with carbon dioxide.

Carbon dioxide storage will also add many weeks to the life of bacon, it is stated.

A Courteous Rebuke

French Singer Gave His Host A Lesson In Politeness

Roger was a very famous French tenor who felt that his artistry should command respectful silence. A wealthy citizen engaged him to sing at his home, Roger to receive 1,500 francs for his appearance. He sang his first number beautifully but no one paid the slightest attention, the guests talking and laughing their loudest throughout the rendition.

Deciding that the time had arrived for another selection, the host sought Roger but could not find him. He had disappeared, nor did he put in an appearance that evening.

The following day the sponsor of the party received a note from Roger, together with 2,000 francs. "I have the honor to return the 1,500 francs which I received for singing at your party," wrote Roger. "And I beg leave to add 500 francs more for having so greatly disturbed the conversation of your guests." — Christian Science Monitor.

Boss: "You are 20 minutes late again. Don't you know what time we start work at this factory?"

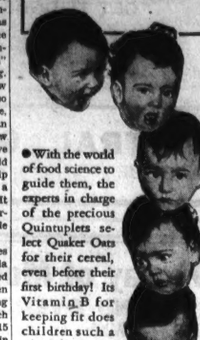

New Employee: "No, sir, they're always at it when I get here."

Little Helps For This Week

I will sing unto the Lord for He has dealt bountifully with me. Psalm 13:6.

Thy calmness bends serene above,
My restlessness to still;
Around me flows Thy quickening life,
To sense my faltering will;
Thy presence fills my solitude;
Thy providence turns all to good.

With a heart devoted to God and full of God, no longer seek Him in the heavens above or the earth beneath, or in the things under the earth, but recognize Him as the great fact of the universe separate from no place or part, but revealed in all places and in all things and events moment by moment. And, as eternity alone will exhaust this revelation which has sometimes been called the Eternal Now, thou shalt thus find God ever present and ever new, and thy soul shall adore Him and feed upon Him in the things and events which each new moment brings, and thou shalt never be absent from Him, and He shall never be absent from thee.

Shrine Of Remembrance

Thousands Gathered The Day This Unique Memorial Was Dedicated

Unique among memorials in Australia's Shrine of Remembrance which, costing $1,250,000, was dedicated on Armistice Day, 1934, by the Duke of Gloucester, third son of King George in the presence of 300,000 persons, including 30,000 war veterans—the largest crowd, it is estimated ever gathered in Australia. Said The New York Times in giving the report of the Associated Press:

"At two minutes before eleven, the Prince and the official party entered the shrine's inner crypt where a ray of sunlight, finding in the side wall of the shrine a crevice so placed as to permit it to enter for only four minutes at 11 o'clock on the morning of every Armistice Day, fell upon the "Rock of Remembrance," sunk in the centre of the crypt.

"The finger of light touched the inscription, 'Greater love hath no man . . .' The Duke and his companions stood looking down on the rock for two minutes, until the crypt was dark again . . ."

Tear Gas

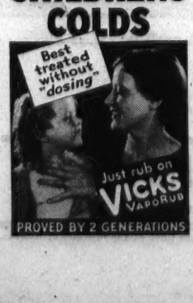

Is Recommended For Defence Instead Of Bullets

J. Edgar Hoover, director of the United States bureau of investigation, recommends tear gas instead of bullets for self-defence. "A dose of tear gas will incapacitate the criminal," he said. "Firearms require a certain amount of technical skill in operation, whereas a gas gun can be used effectively with a little practice."

CENTRAL SMART INEXPENSIVE

Edmonton Weekly News

(Continued from page 1)

astic, proceeded to get in hand all information on problems affecting the dominion as a whole and those having special direct bearing on Alberta.

At the main caucus of provincial members short addresses were given by the members outlining the particular problems and needs in their constituencies and these were followed by speeches and reports from the cabinet ministers on their different departments and the work being done, in which they gave particular attention to the problems dealt with by the local members.

During the caucus sessions Thursday the Social Credit aldermen who had been successful at the polls in the Edmonton civic election were introduced and spoke of their aims for co-operation between the civic government and the provincial administration.

Tuesday evening members of the cabinet were hosts to the caucus at a dinner in the Macdonald Hotel.

No information was obtainable, beyond that in general terms handed to the press daily by Premier Aberhart, as to what was decided with regard to the introduction of Social Credit and the program for the coming provincial legislature, which opens on February 6. It was stated that plans for formulating the necessary legislation to help forward the new economic plan were discussed, but just what those plans were is not made public yet.

The question of Major Douglas' visit was considered and Premier Aberhart intimated that the major will be brought here early in the New Year. Negotiations are under way for this now.

In the Wednesday session of the caucus, which was an extra session to enable the members to conclude their deliberations with the fullest discussion, a project for enlarging the municipal districts and the arrangements under which farmers in poor crop districts will be provided with seed grain for next Spring provided the chief discussion.

Premier Aberhart denied reports that some members had been pressing strongly for immediate payment of basic dividends during the caucus. "We all understand that the province must be placed in a sound financial condition before dividends are paid," he stated.

The second matter of importance during the week was the presentation of R. J. Magor's interim statement covering plans for balancing the budget and placing the province's finances on a better and more business-like footing.

Balancing the provincial budget by March 31, end of the fiscal year was envisioned by Mr. Magor in his report to the premier. The cash loss on this year's operations, Mr. Magor stated, will be $9,546,310, the margin of expenditures over revenues. Providing the province is able to get what it wants from Ottawa in assistance for its refunding program, the decrease of expenditure and the increase of revenues, Mr. Magor said, the loss will be brought within $900,000 of balancing the budget according to his first calculations, and he is now engaged on the problem of finding this amount in order to wipe out the deficit.

Proposed refunding of the provincial public debt, with that of the cities of Calgary and Edmonton, a total of around $200,00,000, the province will gain a saving of around $3,000,000 yearly in interest, and this is among the factors being considered in reducing the loss and balancing the budget.

Mr. Magor also envisioned the amortization of the provincial debt in about 47 years through a sinking fund and other financial economies. Provision will also be made for a set annual fund for agricultural relief, to be regarded as a sacred fund and used only for that purpose. These are among some of his recommendations to date. He expects to hand in several reports as he makes progress in straightening out the province's financial problems.

The province received a grant of $1,000,000 from the federal treasury with which to carry on until the meeting of the dominion-provincial conference on December 9. To that gathering the premier will take seven members of his cabinet including Hon. Charles Cockroft, provincial treasurer; Hon. W. A. Fallow, minister of public works; Hon. J. W. Hugill, attorney-general; Hon. C. C. Ross, minister of lands and mines; J. C. Thompson, provincial auditor and R. J. Magor will also attend the Ottawa gatherings in advisory capacities. Mr. Magor is already on his way east.

Accident Causes Broken Collar Bone

An unfortunate happening occurred on Saturday afternoon last when skiing on Stacak's hill, with a number of other boys, Lou Minkler, Jr., broke his collar bone.

He was immediately attended by Dr. Locke, who set the bone, and he is progressing favorably, but the accident will necessitate his absence from school for a few days.

Before the accident all the boys were having a good time, and young Lou started from the top of the hill, and was travelling about 40 miles an hour when he spilled, striking the hard surfaced ground with unfortunate results.

Haynes

A number of friends of Mr. and Mrs. Sherburne, sprung a little surprise on them Friday night, in the form of a farewell party. Progressive whist was played, honors going to Mrs. Hoskins and Mr. Fawcett, consolation to Mr., Sherburne. Mr. and Mrs. Sherburne are leaving the first of the week for Calgary.

The November meeting of the Ladies' Aid was held in the church, with almost a full attendance of members. They decided to elect the officers for next year at this meeting, fearing the weather might be bad for the December meeting.

The December meeting will be held in the church on the second Wednesday, with Mrs. Rahton as hostess.

A dance will be held in the Haynes hall on Friday night; music by Roth's orchestra.

The Haynes Ladies' club will be held in the church the first Tuesday in December. The ladies are planning a Christmas box for this meeting, with presents for all the members. Election of officers will also take place.

Extra Features at the Avalon This Week

Another good picture is presented at the Avalon Theatre this week which has been drawing the crowds where it has been shown. "The Whole Town's Talking" is a picture filled with comedy, suspense and fast moving action vigorously combined to spell outstanding entertainment, and is one of Edward G. Robinson's masterpieces. Expert timing on the part of the director and star, an excellent script, and an original story, keep the thrills and laughs fairly even. In this picture Jean Arthur back on the screen again, confidently plays the clerk's amused sweetheart. This week the Avalon gives added screen snapshots and "Scrappy's Toy Shop" in addition to the main feature. Next week Claudette Colbert is coming in "Imitation of Life."

URGE MOTORISTS CHECK OVER CARS FOR WINTER DRIVING

A careful check-over of your motor car at this time of the year in preparing for winter driving is essential, according to officials of the Alberta Motor Association.

Close examination now may eliminate mechanical difficulties or other troubles that might develop during cold weather.

Brakes, tires and lighting apparatus should be given a thorough inspection, just to make certain that they are functioning properly and will continue to do so under winter driving conditions.

Motorists also are warned to be on their guard against the deadly carbon monoxide. There always is danger in running the car in a closed garage.

The approach of cold weather always brings an increased toll of deaths from carbon monoxide. To combat this hazard, motorists are urged to make sure a window of their car is always open and to keep their motors in accurate adjustment so that a minimum of harmful gas will be generated.

The heavy toll of road accidents also serves as a warning to motorists to carry insurance protection. In recent months many members have benefitted from the special accident insurance given free with memberships in the Alberta Motor Association.

Nutritions Cheese for Luncheon or Supper

Vegetables with Cheese Sauce

3 tablespoons butter; 3 tablespoons flour; salt and pepper; 1½ cups milk and vegetable water; 1½ or ¾ cup grated cheese; 1 No. 2 can vegetable or 2½ cups cooked vegetable.

Make sauce of butter, flour, seasonings, milk and vegetable water. When thickened add grated cheese and allow to melt in sauce.

Suggestions for Serving Vegetables with Cheese Sauce

Asparagus

Arrange asparagus on buttered toast in individual servings. Pour cheese, sauce over the asparagus and toast—leaving the tips of the asparagus uncovered.

Cauliflower

Break cooked cauliflower into flowerlets. Arrange on toast in individual servings. Add 2 tablespoons chopped green peper to cheese sauce. Pour over cauliflower.

Peas

When cheese sauce is cooked add peas and beat thoroughly. Serve on buttered toast.

Spinach

Add 2 hard cooked eggs, chopped in medium sized pieces to spinach. Mix with cheese sauce and serve on toast or pile spinach on toast and pour cheese sauce over the vegetable.

Corn and Cheese Casserole

1 cup corn; 1 cup bread or cracker crumbs; 1 cup grated cheese; ½ teaspoon salt; 1 tablespoon melted butter; 1 teaspoon Worcesterhire sauce; 2 tablespoons chopped green pepper or pimento; 2 eggs; 2 cups scalded milk.

Combine all ingredients except eggs and milk. Beat egg yolks and add with the milk. Fold in stiffly firm—about 40 minutes.

We have just received two new studio lounges. They are beauties and priced right. **Lacombe Furniture Store.** Advt.

"ROD" RIDER BURNED FALLING OFF TRAIN

CHAPLEAU.—Riding the "rods" from Western Canada to the east, a youthful Medicine Hat adventurer dozed off to sleep as the trans-Canada train steamed its way into this railway divisional point. Curled up behind the tender of the engine to escape the cold north winds, the youth slept on as the engine was run into the round house for repairs. He awakened in the darkened, unfamiliar surroundings. In attempting to reach the door, he fell into the locomotive ashpit and suffered severe burns about the face and arms. He was rescued by railway police.

Notice to Farmers

Farmers are advised to beware of unauthorized purchasing agents buying feed grain, fodder or seed grain for the Alberta Department of Agriculture. If in doubt as to the authority of an agent, ask to see his official Departmental identification.

MORTGAGE SALE OF FARM PROPERTY

PURSUANT to the directions of the Registrar and by virtue of the Powers of Sale provided by "The Land Titles Act" under a certain mortgage which will be produced at the time of the sale. There will be offered for sale by public auction at the Post Office in the Town of Lacombe in the Province of Alberta, on Saturday, the 14th December, 1935, at the hour of 2:30 o'clock in the afternoon, the following property, namely:

The South East quarter of Section 26 in Township 41, Range 28, West of the 4th Meridian, containing by admeasurement 160 acres, more or less, and subject to the reservations and provisoes contained in the Patent from the Crown, excepting thereout all mines, minerals, gas, petroleum and valuable stone.

Terms of sale to be ten per cent. cash at the time of the sale and the balance according to the terms and conditions to be made known at the time of sale or upon application to the vendor's solicitors.

The above property will be offered for sale subject to a sealed reserved bid and free from all encumbrances.

The vendor is informed that the above property is situated at about fourteen miles from the town of Lacombe at which point is the nearest Post Office. The nearest grain elevator is at Gull Lake, 6½ miles distant from the property, and the nearest school is one-half mile from the property.

The land contains 160 acres of which 110 acres are under cultivation. There are approximately 50 acres of brush and 30 acres of land seeded to brome. All of the property could be cultivated if cleared.

The soil is a black loam, part chocolate, six inches to two feet deep, with clay subsoil. There is a drilled well on the property. The property is all fenced, and three-quarters of a mile is cross-fenced, with 2 and 3 strands of barbed wire and poplar and tamarac posts.

Buildings on the property are: 1 frame dwelling with shingle roof, 24 x 24; 1 frame barn with shingle roof, 20 x 30; 1 frame hen house, board roof, 12 x 12; 1 frame hog house, board roof, 12 x 26; 1 frame and slab granary, board roof, 12 x 16; 1 frame well house, no roof.

For further particulars and conditions of sale, apply to Messrs. Newell, Lindsay Egnery & Ford, Barristers, Canada Permanent Building, Edmonton, Alberta.

Dated at Edmonton, in the Province of Alberta, this 27th day of September, A.D. 1935.

Annual Fire Losses

During the next few months while King Winter holds the prairies in his icy grip and folks are piling furnaces and stoves high with fuel to withstand his onslaught the newspapers can be depended upon to relate a number of stories of dreadful tragedy.

They will be stories of families or members of families burned to death, the charred remains of their homes their funeral pyres. In some cases a whole family will disappear in the raging inferno that will devour their homes. In other cases, some members of the family will escape in night attire or scanty clothing only to suffer agonies and perhaps death from frostbite as a result of their misadventure.

Adults and children ranging almost from maturity to infants a few months old will be asphyxiated by smoke or burned to a crisp. Others will suffer untold agonies for weeks and perhaps months from burns or frostbites occasioned by a hurried flight from a burning home in sub-zero weather, or by a combination of both. These will represent a portion of the toll to be exacted against the prairie dweller during the winter of 1935-36 by the Fire Demon, if the history of the past few winters is repeated.

In addition to causing the death of a considerable number and the injury, permanent or temporary of a still greater number, the fire fiend will, during the twelve months of 1936 take a further toll of property to a total value of approximately four and a half millions of dollars in the provinces of Alberta, Saskatchewan and Manitoba, if the fire loss story of the past three years is repeated.

These facts and figures, borne out by official data and records of the fire commissioners of the three provinces indicates that people are paying an appalling tribute to carelessness, or ignorance of the dangers they run when they fail to exercise proper control over one of the most useful elements in the service of man, when kept in its place.

For accompanying the facts and figures in the possession of governmental officials is sufficient evidence to show that carelessness or ignorance must be indicated for this tremendous loss of life and property. The testimony indicates clearly that most of these tragedies are needless. They can be obviated if proper precautions are taken at the right time.

Out of a total of 49 deaths by fire in Alberta and Saskatchewan in the calendar year, 1934, thirteen, or more than one-fourth, were directly attributable to the misuse of gasoline, distillate or coal oil in lighting fires or speeding up slow fires in kitchen ranges, stoves or furnaces. In addition the deaths of a number of other people who were trapped in homes or buildings destroyed by fire where the cause of the outbreak is listed as "unknown" may also have been placed in the same category if the origin of the conflagrations could have been determined.

But that is not the whole case against this trinity of highly inflammable and therefore dangerous liquids. For, in addition to the number cited, five more lost their lives as a result of explosion of gasoline, four on account of explosion of coal oil lamps, two because coal oil stoves exploded and one other died when gasoline used as an agent for cleaning clothes ignited during the process.

While misuse of gasoline and coal oil is the major factor in loss of life by fire in the prairie provinces, defective heating apparatus is responsible for the greatest property loss as well as for some of the deaths and this fact is also clearly brought out in the data contained in the reports of the fire commissioners.

Approximately 3,000 buildings are either a total loss or seriously damaged by fire in the three provinces every year, occasioning a monetary loss of about $2,250,000 or approximately one half of the total average annual property loss by fire.

Most of this loss naturally occurs between November 1 and March 31, as might be expected, this being the period when furnaces and stoves are being forced to capacity to combat the outside cold.

Unfortunately the origin of two-thirds of the heaviest losses is never determined, but of the remaining one-third more than 50 per cent. is laid to the door of defective chimneys, stoves and stove and furnace pipes and one half of the remainder to carelessness of smokers in disposing of cigar and cigarette butts and pipe ashes or matches.

Experience has shown that the greatest property loss occurs in January during the period of the most severe winter weather and simultaneous with some of the most direful tragedies to prairie residents.

In the light of these facts, it would seem almost unnecessary to issue warnings to people to refrain from using inflammable liquids to hasten fires, to make sure that all heating apparatus is in safe condition to withstand a long siege and to exercise care when smoking. But such warnings are issued frequently by authorities and still the tragedies and losses continue.

Produce Daylight Movies

Shows Pictures On The Screen In The Sunlight

Moscow, Russia, shortly will open a daylight motion picture theatre in a public park. After several tests the invention for producing pictures in sunlight is declared a success. It involves the use of two mirrors, one of which serves as a screen. The projector is fixed above the screen, and a mirror placed a short distance in front of it reflects the picture on to the mirror-screen. The audience sees a clear picture on the screen, it is claimed, in the brightest of light.

Modern Blocks For Shanghai

Work is under way on the first of four model units designed to house a large portion of Shanghai's slum population, estimated at 100,000. Each of the four units will have about 300 houses, built alike in rows of six each. Each unit will have its own playground, nursery, public school, tea house, co-operative store and public bath house.

Trans-Atlantic Air Service

New Style Of Craft May Make Experimental Flights Next Year

Two airplanes of radically different types are being constructed by Imperial Airways Limited, for trans-Atlantic service, it was disclosed in London.

Sir Eric Geddes, chairman, told the annual meeting of the company one of the craft may be ready for experimental flights next year. He said "I believe not only to our interests but also to those of our cousins, the United States, that Great Britain and the United States should co-operate in the establishment of regular air service from Europe to North America.

The Swedish botanist, Linnaeus, built a floral clock, made up of flowers which open at various hours of the day.

There should be an unlimited supply of gratitude. It is so seldom used.

Invents Vacuum Concrete

Eliminates The Necessity Of Long Waiting For Drying

A revolution in concrete, which foreshadows significant improvement in the construction of dams, bridges, piers, roads, foundations and tall buildings, was demonstrated at the Yale University laboratories before a representative gathering of experts.

Well-known engineers, state highway officials, contractors and builders witnessed a radical departure in the utilization of all types of cement, which it was asserted makes possible a concrete from 30 to 100 per cent. stronger than that produced by present methods and which will harden and dry in about twenty minutes.

The new method is the invention of Karl Paul Biller, New York City civil engineer.

By this invention, Duff A. Abrams, an authority on cement, said "Mr. Billner has eliminated the outstanding weakness in present methods of making concrete."

The present weakness is the excess water needed to produce plasticity in the cement mixture. This excess water can be removed only by drying, which frequently results in cracking and weakening a structure. The drying also requires considerable time, an economic factor in the case of large dams, skyscrapers and important highways.

Mr. Billner's method consists in extracting the excess water in the fresh concrete immediately after casting and laying by a vacuum process. The vacuum not only quickly withdraws all the excess water, but it also simultaneously compresses the concrete to make it dense and close up any voids due to the removal of the water.

The dual vacuum action is accomplished by placing an air-tight cover on the concrete slab immediately after pouring and creating a vacuum between the cover and the concrete. This sucks out the excess water which is drawn off and collected in a vacuum tank.

The vacuum under the cover at the same time creates a corresponding air pressure on top of the mixture to compress and harden the mass.

110 Years Of Age

Britain's Oldest Woman Still Enjoys Her Tea

Believed to be the oldest woman in Britain, Mrs. Caroline Merriott celebrated her 110th birthday in Mayday Hospital, Croydon, by being hostess at a tea-party.

Arrayed in her best clothes, and with a new white bonnet, she cut a birthday cake that had been specially made for the occasion, and entertained some of her friends.

In spite of her age, Mrs. Merriott is still an active woman mentally, and her voice is surprisingly strong. She eats three meals a day, and drinks several pints of tea with great enjoyment.

When she was born she was so small that for a week after her birth they could not put any clothes on her. She loves to recall her father's tale of how one of her uncles bet £100 that they could put her into a quart jug.

"They tried," she gleefully said, "and they got me in."

Born at Tooting Corner, ten years after Waterloo, Mrs. Merriott remembers the Crimean War, the Corn Law riots, and the Coronation of Queen Victoria. She has been married twice, and her second husband died in 1906.

She worked in a laundry until she was 85.—News of the World.

Knighted For Serenade

Leader Of Madrigal Society Was Honored By Queen Victoria

As Queen Victoria sat eating her breakfast in Windsor Castle on May 24, 1899, a burst of song rose from the Grand Quadrangle. The Queen was surprised and delighted. It was her eightieth birthday, and the serenaders were members of the Windsor Madrigal Society. She went for their leader, Mr. John Soundly, who was also mayor of the Royal borough, ordered him to kneel at the side of the breakfast table, borrowed a sword, and knighted him on the spot. Sir John Soundly has just died at Windsor.

Used To Large Bundles

Although accustomed to carrying trunks and other heavy articles on his back, the hamal, or Turkish porter, will flinch when asked to carry a small bundle under his arm or in his hand.

Polly—"Shall I go to a mind-reader or a palm-reader?"

Paul—"Make it a palm-reader. Undoubtedly you have a palm."

Zigzag lightning is a myth; real lightning twists and wanders across the sky, but never makes sharp angles.

An average of one person in every 30,000 has his heart on the right side of the body, according to medical records.

"My wife came from a very large family, sir."

"You're lucky. Mine brought hers with her."

New marriage laws in Siam make divorce much easier. 2124

Why at 40 You Think You're "GROWING OLD"

It's Frequently Just an "Idea." Not "Old Age." And According to Scientists, May be Something No More Alarming Than A Touch Of Acid Stomach

At about 40, many people think they're "growing old." They're tired a lot. Have headaches. Stomach upsets. Dizziness. Nausea.

Well, scientists say the cause, in a great many cases, is merely an *acid condition* of the stomach. The thing to do is simply to *neutralize* the excess stomach acidity.

When you have one of these acid stomach upsets, all you do is take Phillips' Milk of Magnesia after meals and before going to bed.

Try this. You'll feel like another person! Take either the familiar liquid "PHILLIPS'", or the convenient new Phillips' Milk of Magnesia *Tablets*. Made in Canada.

Also in Tablet Form!

Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Each tiny tablet is the equivalent of a teaspoonful of Genuine Phillips' Milk of Magnesia.

PHILLIPS' *Milk of Magnesia*

Chinese Art Treasures

Four Special Men Travel To Pack Priceless Relics

Four Chinese have arrived in London with a priceless load of tradition. They will remain there seven months and then travel back to China. Their mission is simply to unpack boxes of Chinese art relics, repack them and return home next March. Millions of dollars worth of treasures are in the boxes. These treasures of Chinese art have been sent from the Emperor's Hidden City for the Chinese Art Exhibition at Burlington House in November. T'ang Hsi Fan, who travelled in the warship Suffolk with them as escort, said: "Each of the 1,020 pieces had a box made to measure, covered in heavy yellow silk and embroidered with the imperial crown. Before packing the treasures we made a porcelain imitation of each, put it in the box and threw it 10 yards to see if it would break."

Barter Chickens For Bible

Salesman In North Accepts Them In Place Of Money

Barter has entered into the lives of Bible salesmen, it was explained by Rev. S. G. Pinnock, field secretary of the British and Foreign Bible Society, when speaking before the 47th Baptist convention of Ontario and Quebec recently held at Windsor, Ont.

Mr. Pinnock told of a New Liskeard agent who visited a country home and said he would take chickens for the Bible in lieu of money. No immediate transaction followed, but later that night he was roused from his sleep. A bag was thrust into his hand at the door and a request for a Bible followed. The bag contained chickens.

The field secretary revealed one of the most recent Bible houses to be acquired by the society was one in Addis Ababa.

Build Military Roads

Super Highways To Be Constructed In Germany

A scheme for a vast network of super-highways in Germany, which foreign experts see as of great military significance, was a step nearer realization recently.

Officials announced work would begin soon on a 19-mile stretch in two Berlin suburbs, forming part of a big circle of the proposed super-highway around Berlin. It will be important in serving southern traffic.

One foreigner observer said: "One lesson that Germany learned in the Great War is the need for perfect communication facilities."

Newspaper Reporting

Journalists Aim To Get At The Truth, Without Verbiage

It is the same in newspaper reporting. The whole truth cannot be told. There isn't time to write it. There isn't space enough in the paper to hold it, and if it could be all told the reader would grow weary before he had waded halfway through it. The newspaper, like the court, aims to get at the essential truth. The reporter selects his details and builds his picture. The things that do not matter he leaves out. His is a painter rather than a photographer. — Vancouver Province.

The Pilgrims were followers of the Puritan movement and, as such, abhorred dancing in all forms.

Kwangtung, China, is expanding its railway system.

How War Started

Hard To Believe Story Credited To Mussolini's Son

Count Ciano, son of Premier Mussolini, is credited with thus relating the story of how he started the war in Ethiopia by an air raid over Ethiopian villages:

"Some of the natives stared at us as if we were their own airplanes. I released bombs directly in their midst. They ran helter-skelter. Other airplanes dropped bombs. We then climbed down to about 100 metres from the ground and gave them the machine guns. Several shots were fired at us."

Much like shooting rabbits in a meadow; and told in the same tone that a sportsman might explain how he got his "bag". So began Italy's "day of glory." It can only be hoped for the sake of the Italian people and of the respect they enjoy among the peoples of the world that the count as been saddled with a story he never told and a butchery he never engaged in.—Edmonton Bulletin.

As She Understood It

Woman Convinced Her Daughter Had Learned Egnough

"I have called to see why your daughter Emily hasn't attended school lately," said the school attendance officer as he stood at the cottage door.

"'Cause I think she's learnt enough," retorted Emily's mother shortly.

"Why", exclaimed the visitor, "she's only passed through two classes yet."

"Well, ain't that enough?" asked the woman. "I dunno what eddication is comin' to. When I was young, if a gal understood the elements of distraction, provision or replenishin', an' the common dominator, an' knew all the rivers and their obituaries, the provinces and the umpires, she was reckoned to have eddication enough to see her through."

FASHION FANCIES

"SELF-HELP" BUTTON-DOWN-FRONT EASY-TO-MAKE DRESS FOR SCHOOLGIRLS

By Ellen Worth

Don't you think this is a cunning dress for little school-age daughter? It won't catch on her nose or muss her hair up (so it needs more combing) getting it on and off. She doesn't need any aid from mother, either, to slip into it.

One of the new looking wine-red ground cotton prints made the original. The collar and cuffs are white pique.

Another delightful suggestion is wool jersey in pottery rust with white linen collar and cuffs made detachable, so as to be readily removed for laundering.

Style No. 756 is designed for sizes 4, 6, 8 and 10 years. Size 8 requires 2 yards of 36-inch material with ⅞ yard of 35-inch contrasting.

Patterns 15c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

Let the new Fall and Winter Fashion Magazine assist you in assembling your family's fall clothes. There are designs for every type and every occasion. And of course one of our perfect-fitting patterns is obtainable for every design illustrated. Don't delay! Send for your copy to-day!

Chantecler CIGARETTE PAPERS

Strange Ring Unearthed

May Have Been Worn By Chinese In Prehistoric Days

Origin of a strange ring unearthed in a Vancouver garden is proving a subject of unusual interest to students of British Columbia's early history.

The band is of heavy silver a quarter of an inch in width. It is not joined at the back, after the style of early rings. At the front, the design is lost because of a piece of lead appearing to have been stuck in place by the application of heat.

A. Speir uncovered the relic six feet below ground while attempting to move a half buried log at the back of his garden. Pieces of shell and colored glass were adhering to the end of the log, and as he brushed them aside the ring came into view. Forty years ago this portion of Vancouver was covered with forest.

One theory is that it was dropped years ago by an Indian or early miner. Another is that it may have been worn by early Chinese centuries before the arrival of the white man. Students point to other evidences of Chinese occupation in prehistoric days.

Marvels Of Surgery

Limbs Of Crippled Children Are Made Straight And Strong

Detouring of muscles and nerves in surgical remodelling of arms and legs to convert crippled children into straight and strong boys and girls was described to the American College of Surgeons.

The operations were reported by Leroy C. Abbott, M.D., and Frederick C. Bost, M.D., of the University of California medical school.

One was performed on a 13-year-old girl, with a leg deformity due to a brain injury at birth. The leg suffered from permanent spasm, stiffening and deformity, because part of the brain controling certain leg muscles did not work properly.

The surgeons cut some of the nerves leading to the faulty muscle, thereby disconnecting them partly from the haywire control. Then they lengthened the muscles, which had been too short, by a tendon operation.

The result was to relieve the strain which had held the child's leg in the deformed position.

Terrifying Air Death Ray

Can Explode A Plane At Sixty Miles Distance

That he had received a private invitation to carry out tests of his "electric death ray" in England, has been disclosed in Copenhagen by M. Ravn, the Danish engineer. He declares that the ray will cause aircraft to explode in the air at a distance of 60 miles. M. Ravn will accept the invitation on certain conditions, chiefly concerning the electric potential with which he works. This is very high and involves risk. The inventor states that he can produce an effective "death ray" apparatus within six months. M. Ravn claims to have invented the "death ray" for use against aircraft in the early days of the World War.

Workers in noisy British factories are being supplied with "ear-defenders" in the interests of well-being and efficiency.

The largest diamond ever found, the Cullinan, was made into nine large stones and more than 100 small ones.

It has been estimated that three Americans are killed daily by carbon monoxide gas from automobile exhausts.

Olympic Camera Is Fast

Can Show Pictures On Screen Ten Minutes After Race

A motion picture film which can be shown on the screen ten minutes after taking the picture has recently been perfected especially for the Berlin Olympic games in 1936.

This film is used in a camera which makes 100 exposures per second. While the race is being filmed, a clock mechanism, released the moment of its start, records the time on the film every one-hundredth of a second, so that the runner's time as he crosses the finish line is clearly registered on the film.

The officials at the Olympic games at Los Angeles used a similar device, but it took quite some time after the finish of a race before the film was ready for examination of the judges. Another advantage of this new German camera is that the pictures are taken by two stereoscopically arranged lenses of red and green glass respectively, which results in a more vivid and lifelike image than it has heretofore been possible to obtain.

By using this new device the judges will be able to decide the outcome of a contest with greater accuracy and with more justice to the competitors than the human eye is capable of.

Westerner Obtains Honour

Vancouver Youth Is First Merchant Service Midshipman Pilot

One of Vancouver's sons has gained the distinction of being the first merchant service midshipman in the British Empire to enroll for aviation and receive a pilot's "A" license.

He is Cadet Captain Walter R. N. Sturdy, who left on his first voyage on the Empress of Japan out of Vancouver for the Orient. He has signed as a cadet with the C.P.R. for three years.

Flying is a new field of endeavor for the merchant service. Cadets receive theoretical studies on board H.M.S. Conway, the training ship at Liverpool, and practical experience at Hooton aerodrome, Liverpool.

Young Sturdy came within 20 minutes of creating a record in training for solo flight. The requirement calls for 12 hours before taking solo, and the record for the British air ministry is five hours. The Vancouver boy made it in 5 hours, 20 minutes.

Sight Restored

Toronto Woman Recovers Sight As Result Of Earthquake

Sixty-three-year-old Mrs. Kate Mitchell saw clearly for the first time in three years as she turned on the electric lights just after the earthquake shook her King street house in Toronto. The tremor was like a message "direct from heaven" for her, the white-haired woman said, convinced the shock restored her sight.

For three years, Mrs. Mitchell said she had been able "only to see shadows." She could not leave the house without aid of another person.

"Thank God I can now see," she said—"the long hours of night are over."

World's Rarest Stamp

The world's rarest and most valuable stamp, a British Guiana one-cent stamp owned by Mrs. Costa Scala of Utica, N.Y., found no buyer recently when placed on auction at the opening price of £7,500 (about $37,500). It is insured for £10,000.

It is estimated that a dairy cow consumes approximately eleven and one-half tons of water per year.

The only quicksilver mine in the United States is in Terlingua, Texas.

DON'T RISK BAKING FAILURES . . .

"I CAN'T AFFORD TO RISK FAILURES DUE TO INFERIOR BAKING POWDER. THAT'S WHY I INSIST ON MAGIC. IT'S ECONOMICAL — LESS THAN 1¢ WORTH MAKES A BIG CAKE,"

says MISS MARGARET McFARLANE, *Dietitian of St. Michael's Hospital, Toronto.*

Leading Canadian Cookery Experts warn against trusting fine materials to doubtful baking powder. They use and recommend MAGIC Baking Powder for perfect cakes!

MAGIC BAKING POWDER

CONTAINS NO ALUM—This statement on every tin is your guarantee that Magic Baking Powder is free from alum or any harmful ingredient. Made in Canada

Warehouses At Calgary, Edmonton, Regina and Winnipeg

New Rust Resistant Variety Of Wheat To Be Developed During 1936

New varieties of rust-resistant wheat produced by Canadian research institutions will not be released to farmers this coming year but will be multiplied in 1936 "exclusively under the control of the originators" a press statement issued following a conference of representatives of the federal department of agriculture and the national research council at Winnipeg, intimates.

The new wheat from Minnesota, Thatcher, bred for rust resistance, was commended. This wheat has already been licensed for use in Canada.

The new rust-resistant wheat produced by the Rust Research laboratory at Winnipeg has been named Renown. The selection from strains bred at Brandon experimental farm has not been named. The University of Saskatchewan selection is called Apex.

The general suitability of these varieties for western farming conditions, including such factors as yield, strength of straw, earliness, resistance to disease, as well as the milling and baking quality were critically examined. Several of these varieties were found, in the extensive tests which were carried out, to be not only rust-resistant, but desirable from the standpoint of yield and quality.

In order to insure the most rapid propagation of this valuable material, it was decided that it will be increased in 1936 exclusively under the control of the originators. In order to speed up the multiplication of the material and to safeguard and to provide against loss through drouth, arrangements are being made to have a considerable amount grown on irrigated land at the Dominion experimental station, Lethbridge, Alberta.

In view of the situation, the committee thought it desirable to make a statement with regard to the general characteristics of Thatcher wheat. The statement reveals that this wheat ripens two or three days earlier than Marquis and has very strong straw which is slightly shorter than that of Marquis. With regard to rust resistance, Thatcher is described by the Minnesota experimental station as moderately resistant.

In some seasons it shows as much as 40 to 50 per cent. rust. Thatcher wheat is almost completely susceptible to leaf rust and covered smut, but is practically immune to loose smut. In this connection it is of interest that the rust resistant wheats produced in Canada are more constant in their resistance. So far, however, the rust infections on Thatcher wheat have not appreciably affected the yield. During these tests conducted for three years it has given somewhat higher yields than Marquis. Under rust epidemic conditions it gives much higher yields than Marquis. In appearance, Thatcher is not equal to Marquis or Reward, the kernels being smaller and somewhat dull in color. In weight per buchel, Thatcher averages slightly lower than Marquis.

In regard to the milling and baking quality, Thatcher gives a satisfactory yield of flour, which, however, tends to be slightly yellower than the flour obtained from Marquis. Its baking strength is satisfactory.

The meeting was held under the chairmanship of Dr. R. Newton, director of the division of biology of the national research council, Ottawa. Others present were: Dr. K. W. Neatby and Dr. A. G. McCalla, University of Alberta; President W. C. Murray, Dr. W. P. Thompeon, Dr. T. Thorvaldson, Dr. R. K. Larmour and Dr. J. B. Harrington, University of Saskatchewan; Dr. G. P. McRostie, University of Manitoba; Dr. C. H. Goulden, Dr. R. F. Peterson, J. Welsh, Dr. J. W. Craigie, Dominion rust research laboratory; Dr. W. F. Geddes, T. R. Aitken, Dominion grain research laboratory; L. H. Newman, A. G. O. Whiteside, central experimental farm, Ottawa; Dr. J. G. Malloch, national research council, Ottawa.

Will Live In England

Earl of Egmont Is The First Cowboy Peer

The Earl of Egmont, 21-year-old son of a Canadian rancher, who is shortly going to England to live at Avon Castle, Ringwood, Hampshire, and take his seat in the House of Lords, is the only peer who can ride a bronco, rope a steer, or break in a horse, comments the News of the World. The earl succeeded to the title in 1932. To pay his father's death duties he sold most of the 60 paintings at Avon Castle, which included works by Sir Joshua Reynolds. When in 1930, the earl—then Viscount Perceval—and his father came to England and lived at Avon Castle, they helped do their own cooking and domestic work. The estate is worth £250,000, but some years ago it was put up for sale at £80,000.

Len: "Clark calls himself a human dynamo."

Dun: "Well, why shouldn't he? Everything he has on is charged."

Regardless of the energy expended in washing dishes clean, a film of grease one-millionth of an inch thick always remains on each dish.

Bees And Tartaric

Unnecessary To Add Acid To Sugar Fed To Bees

Beekeepers are continually being advised to add a small amount of tartaric acid to sugar syrup when feeding such syrup to bees as winter stores, states the progress report for 1960-31-32 of the Bee Division, Dominion Department of Agriculture. The claims made for the use of tartaric acid are that it prevents the re-granulation of the syrup and assists the bees to invert the sugar. At the Central Experimental Farm, Ottawa, a considerable amount of sugar has been fed to bees every winter without adding tartaric acid and without any apparent injurious effect on the bees. Further, from the results of an experiment carried out during the three years, it would appear to be unnecessary to add acid or any other agent to a solution of two parts sugar and one part water as winter food for bees. The main feature of the experiment was that in no case where a straight solution of sugar and water was given to the bees did the solution recrystallize in the combs, and the inversion of sugar was as equally progressive as with the tartaric solution, showing that the bees required no assistance so far as the inversion of sugar was concerned.

Waterbucketfull Of Fish

Welsh Town Has Many Oddities Including Its Own Name

Stories from north Wales, telling about the village of Llanfairpwllgyngiddgogerychwwyrndrobwllanddsyliogogoch are wrong. William Richard Smart, tailor, says so.

The name has been published as meaning "The village of the church of St. Mary by the pool of white hazels near the swift whirlpool of St. Tysilio's church of the Red Cave."

Smart lived in the village and declares the correct name of the north Wales hamlet is Llanfairpwllgwngllgogreychwrndrobwllpwllsaintgerdeiltogogogoch, which is translated into English as "The village of the fair palace close to the white whirlpool in Saint's pool close to Desilio's church near the fish trap."

The "fish trap" is a trough which fills with fish at high tide. Natives may go there and, for a fee of sixpence, scoop up a waterbucketfull of herring.

The town's cemetery is on a body of land which Smart says becomes an island for a certain period every day when the tide is in, so funerals can be held only at low tide.

A tree bearing seven different kinds of apples, all of different flavor and exceptionally good, is another of the village's attractions.

Long Distance Phone Calls

Cheap Rates In Britain Bring Increased Revenue

Britain pioneered nearly a hundred years ago in introducing "penny postage" and to-day everyone takes it for granted that a letter may be sent half-way round the world for two or three cents.

This year Britain has led the way in cheapening long-distance telephone calls down to an almost nominal price. After seven o'clock in the evening a call from any point in Great Britain to any other costs only a shilling or 24 cents.

In a recent "Spectator" the experiment is described as a great success. Some trouble has been encountered through the crowding of telephone wires with messages, but that is being overcome. The multiplication of business is making the shilling rate pay, just as a huge increase in the volume of letters made the penny post pay.

The British example a century ago was followed by every other country though only after the lapse of a generation. It may be hoped less time will be needed to make the shilling long-distance telephone call universal. —Winnipeg Free Press.

African Christmas Toys

Modern Generation Demands The Latest Even In Playthings

The people who sell toys are upset about this Ethiopian business.

"All we hear is Ethiopia—Ethiopian tanks, they want Ethiopian soldiers, Arabs on camels, and models of Ethiopian villages to bomb," sadly proclaimed Richard Ilk, manager in New York of one of Fifth avenue's largest toy stores.

"Whoever heard of an Ethiopian soldier before all this? What do they look like, what sort of guns do they carry? The newspapers say they all look different and all their weapons are different. How can you make a regiment of toy soldiers look all different?

"But the young boys to-day insist on nothing else, so our toy soldier sculptors are working on the idea and by Christmas rush time there may be Ethiopia toy soldiers."

As long ago as before 1850, the saxophone was officially adopted as an instrument in use in French military bands.

Colds In Poultry Flock

Precautionary Measures Are Necessary To Guard Against Trouble

In the fall and early winter extra precautionary measures are necessary to prevent the occurrence of colds in the poultry flock. Crowded conditions in the houses, lack of ventilation, dampness, dirty quarters, drafts, and sudden changes in temperature are the most common causes of this ailment. The common cold causes losses in the flock by interrupting egg production, and by predisposing the birds to more serious diseases that result in death. At the Dominion Experimental Farm, Brandon, Manitoba, the preventive measures used have been successful in avoiding serious trouble.

The common causes of colds as mentioned, are avoided as much as is possible. The over-crowding of young stock in their quarters is guarded against, draughts in the vicinity of the roosts are prevented, and care is taken to keep the houses and litter clean. Young birds that have been reared in the open are not closely housed without making adequate provision for ventilation. Occasionally individual birds will contract colds in the autumn on account of being exposed or on account of low resistance. Such isolated cases may go unnoticed by the attendant. The spreading of colds by such individuals through the medium of the drinking vessel is reduced through the use of a mild disinfectant in the water. A few grains of potassium permanganate, sufficient to colour the drinking water a deep purple is usually used for this purpose. Late moulting birds are kept in comfortable quarters until they get their new feathers.

A pen of birds that becomes affected with colds is first given a mild physic of half a pound of Epsom salts per hundred birds, repeated in five or six days if required. A ten per cent. solution of argyrol has been found a most effective antiseptic agent in treating colds in poultry. By the use of a medicine dropper, a drop of this solution is placed in each eye, each nostril, and in the cleft in the roof of the mouth. As much ventilation as the outside temperature will permit is provided, and the contact of affected birds with healthy ones is avoided as much as possible. Soft feeds, such as dry and wet mashes, are largely employed for the affected birds.

As with all other diseases, prevention rather than treatment should be the main objective. The extra attention required in safeguarding the flock from the common cold will accomplish much in avoiding the diseases that follow in its wake.

World's Largest Telescope

Shows No Void 500 Million Light Years Away

A major discovery of the world's largest telescope, that 500 million light years away, out to the horizon of its sight, there is not one sign of a void in any direction, was described at Yale University by Dr. Edwin P. Hubble of Mt. Wilson Observatory.

This entire space is filled with nebulae, mostly swarms of stars travelling like bees swarming in flight. In these far-off swarms the telescope detects iron, hydrogen and calcium.

It detects nothing whatever to forecast how much farther man must see to find any frontier of creation, or even to find anything startlingly different.

"The observable region of space", Dr. Hubble said, "is a vast sphere, perhaps a thousand million light years in diameter. Throughout the sphere are scattered a hundred million nebulae—stellar systems—in various stages of their evolutionary history.

"The nebulae are distributed singly in groups, and occasionally in great clusters, but when large volumes of space are compared, the tendency to cluster averages out. To the very limits of the telescope the large-scale distribution of the nebulae is approximately uniform."

No individual stars can be seen except in the very closest nebulae. But the great 100-inch telescope is able to estimate the number of stars by the total mass, and to gauge the sizes of the swarms.

The size of the nebulae ranges from 1800 light years diameter of swarms which seem round like a ball, to 10,000 light years diameter for forms which have unrolled into open spirals.

But if all the solid matter composing these vast swarms were divided into dust and spread evenly through the immense space the 100-inch telescope can see, the result would be about one grain of sand per volume of space equal to the size of the earth.

Soybean growing in the United States has increased a hundred fold since 1907, from 50,000 acres in that year to more than 5,000,000 acres in 1935.

Why there should be a bumper crop of pine seed in the South regularly about every seven years is a mystery to plant scientists.

Blizzards make life easier for the ptarmigan of the far north by keeping the feeding grounds swept free of snow.

TWENTIETH-CENTURY CHILDHOOD LEARNS ABOUT IT ALL —The Bulletin, Glasgow, Scotland.

Ancient Cab Still Useful

Decrepit English Taxi Takes Fancy Of American Who Ships It To Boston

An ancient taxi caught the eye of a wealthy American, who took a fancy to a decrepit old taxicab during a visit to England. He had it transported across the Atlantic for use on his exclusive summer estate near Boston. The old taxi, which for the past 20 years has plied the streets of Liverpool, made an indelible impression on Mr. Donald Angier, of Chestnut Hill, and of Marion, Cape Cod, when he was last in England. He determined to have it for his own. Purchasing it for $30, he had it shipped across the Atlantic at a cost greatly exceeding its value. The cab, complete with taxi-meter, old fashioned horn and padded leather seats, is now being used to convey guests from Mr. Angier's summer mansion at Marion to the yacht club, the country club or the beach, as the case may be.

This Is Really News

Publisher Of Weekly Paper Tries To Tell You

What is news? Frank B. Cox, publisher of the Douglas County (Nebraska) Weekly Gazette, answers the question in an advertisement in a recent issue. News is when you have: Died, moved, eloped, been ill, sold out, sold hogs, been shot, been born, had a baby, been drunk, been gypped, had a fight, broke a leg, had a party, caught cold, been robbed, had company, been married, purchased a car, been visiting, broken an arm, been courting, been divorced, been arrested, stolen anything, gone crazy, lost your hair, had a birthday, had an anniversary, been bitten by a snake, had an accident, cut a tooth, or had an operation. Yes, that's news.

One and a half acres of farm land per person is required for the production of enough food for an adequate diet.

Grew Rare Plant

Australian Hibiscus Exhibited At Flower Show In London

At a charming flower and vegetable show in the Kew Gardens district most of the exhibits came from little gardens and allotments among the streets; but were none the less excellent on that account. Among special plants exhibited was a rare and beautiful hibiscus, quite new to most of us.

The story of it is this: A small box, of no more value than an empty match box, was left in a London omnibus. It contained only some common Australian stamps, but the finder noticed at the bottom two small black objects which he took to be seeds. These he sowed and carefully tended. One only germinated; and from it grew this rare and desirable Australian hibiscus.

Another new plant, which will be on the market for the first time next year, was shown, though not in competition. It was a bowl of an Asiatic chrysanthemum, light pink in color, single with very light green foliage. It suggests rather a very delicate pyrethrum or aster.

An Unusual Accident

Car Using Railroad Tracks Causes Crash At Crossing

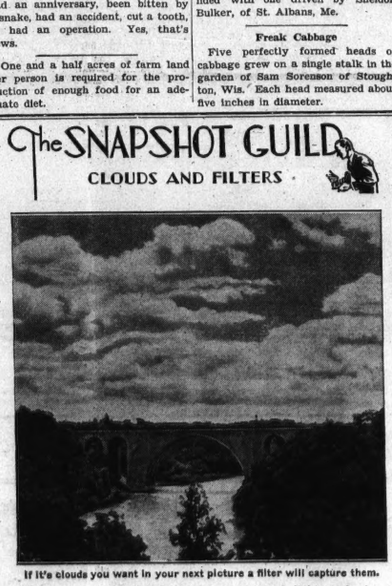

A curious accident at a railroad grade crossing, in which two automobiles but no train was involved, resulted in the death at Skowhegan, Maine, of Robert Moore, 46, a fish and game warden. His car equipped with railroad wheels, Moore was driving over abandoned tracks of the Maine Central Railroad at Bingham when, at a grade crossing at the crest of a small hill, his machine collided with one driven by Sheldon Bulker, of St. Albans, Me.

Freak Cabbage

Five perfectly formed heads of cabbage grew on a single stalk in the garden of Sam Sorenson of Stoughton, Wis. Each head measured about five inches in diameter.

The SNAPSHOT GUILD

CLOUDS AND FILTERS

If it's clouds you want in your next picture a filter will capture them.

Last week the Snapshot Guild received a letter from a reader who lives in the country. She wrote in part—"At this time of year the clouds are simply beautiful and often when their formations are unusually attractive I take many snapshots hoping they will register and give a rather true picture of the beautiful scene. I have been somewhat disappointed in the results, however, for these beautiful, soft, white clouds have not appeared in the picture as true to nature as I had hoped for."

Clouds do add to the beauty of any outdoor picture but it is true that they do not always register through the lens of the camera as they appear to the eye.

Suppose we are taking a picture such as the one above and use a film which is sensitive only to ultra-violet, violet and blue light. We should not be able to distinguish between the clouds and sky if we give enough exposure to show detail in the landscape. This is because the light from the blue sky and the white clouds is very rich in light rays to which the film responds.

Although clouds and blue sky are both rich in ultra-violet, violet and blue, there is a marked difference between the two. The light from the clouds, being white, actually contains a certain amount of green and red light, while that from the blue sky does not.

This, then makes it necessary to distinguish between clouds and sky in order to record both in a snapshot. We must, therefore, use a film which will respond to green, or to green and red light, and also put over the lens a filter which holds back the ultra-violet and blue. The green or green and red light from the clouds will thus effect the film, while practically no light from the sky will get through to it, and in the finished print, the clouds will appear whiter than the sky.

Some film is slightly sensitive to green light but supersensitive panchromatic films will respond to both green and red light. Such films will, therefore, show up the clouds against the sky if used with a yellow filter. The deeper the yellow color in the filter the more violet and blue it removes, or "holds back."

As you will no doubt surmise, there are various types of filters and each type has its limitations so in choosing a filter you must make your own decision, based on your general requirements. A good general all-round filter is the K-2 which requires lengthening the exposure two to four times, depending on the film employed.

There is also a filter known as a Sky Filter used extensively by the amateur to photograph clouds in a landscape with no increase in exposure time. Half of this filter is yellow and the other half clear. This filter can be used without increasing the exposure because the sky is photographed through the yellow part while the landscape, or general subject is photographed through the lower half, which is not colored.

If it's clouds you want a filter will prove invaluable.

JOHN VAN GUILDER.

Canada's First Negro Military Unit Did Service In Victoria In Early Days

Contrary To General Idea

Most Children Raised On Farm Prefer Country To City

Boys and girls always see something worth while when they visit cities—especially when their sightseeing is directed, as it is with boys' and girls' club members. It is true that big hotels, stores, elevators, electric lights and signs, parks and packing plants have their novelty appeal for the first time or two. That there is another side to the story was well illustrated by a story told by George Black of the Alberta Boys' and Girls' Club department.

The boys took in the sights of Edmonton. Some of them had never seen electric lights before. They sat by the hotel bedroom window away into the night watching the electric signs and the rows of lights characteristic of any city. Then they were up at about 4 a.m., watching the city come to life in the morning.

Mr. Black took one of the boys to his home for dinner one evening, and the conversation drifted to what this 13-year-old boy had done at home, such as riding horses, shooting deer, catching fish, and numerous other jobs and sports farm boys take part in that are entirely unknown to the city boy of the same age. He was not long in letting his host know that the city had no charms for him to compare with life in the country.

This reminds one of the junior club member who, on a visit to Toronto last fall, remarked that the city "racket" did not impress him, and that he preferred the farm where he could make as much money in the long run and could have what seemed to him like real fun. He had the insight to see that city life left something to be desired. A good many of these club boys and girls think the fields and farmyards look pretty good when viewed from the crowded city streets and hotels.

For Control Of Cancer

New Treatment Claims To Have Benefited A Number Of Cases

Authors of the Coffey-Humber cancer treatment, which six years ago caused one of the greatest controversies in American medical history, told the American College of Surgeons they believed their system had "benefited a larger number of patients than any other method."

The report gave for the first time the results of the first five years of this treatment, which they called a "research."

The authors, W. B. Coffey, M.D., and Dr. John D. Humber, of San Francisco, said they had treated only hopeless, inoperable cases, totalling 7,513. Of these they said 3,872 died before they could be given the minimum amount of treatment needed for more than relief from pain.

Of the others they said that a selected list of 1,040, chosen because there was no doubt these persons had hopeless, inoperable cancer and no known chance to live, showed to-day 108 known survivors and 50 believed to be alive but not counted because of incomplete records.

Of the 108 they said 53 are positively free of any signs of cancer. The others still have growths which, however, have become inactive.

Electric Soil Heating

Used Extensively For Propagation Of Seed And Promoting Plant Growth

Electric soil heating for the propagation of seed and promoting plant growth is making headway in Canada. Nearly 200 installations are now being used in the province of Ontario in greenhouses, and in hotbeds and cold frames, for propagating the seeds of tomatoes, cabbage, cauliflower, egg plant, peppers, cucumbers, melons, certain flowers, rooting cuttings of flowers, evergreens, and sprouting sweet potatoes. The results of electric soil heating are stated to be very satisfactory. In the Burlington district the use of under-soil electric heating hastens the development of plants to set out in the field by about three weeks, and the growers report that freedom from worry when the weather changes is one of the distinct advantages of the system. Plants have much greater root development, shorter and thicker stems, and are generally more rugged. During the past season, plants when set out in the field had less wilt and made quick recovery from it.

Careful Driver

Presentation of a watch to Alex Williamson, truck driver, in recognition of his driving 273,000 miles on the Edmonton-Calgary highway without an accident, was made recently by directors of the Alberta Motor Association.

Milkman (to suspicious customer) —You won't find nothing wrong with that, madam. All our milk's been paralyzed by a government anarchist.

Acetylene gas produces the highest temperature of any flame. It approaches 7,878 degrees Fahrenheit.

Talk of a colored "foreign legion" to aid Abyssinia recalls Canada's first "all black" organization, the Victoria Pioneer Rifle Corps, a live militia unit with a place in the sun 85 years ago, when the country around was called New Caledonia.

Enactment in California about 1850 of laws considered repressive resulted in the migration of 600 colored people from that state to the British settlements of New Caledonia, of which Vancouver Island was the principal inhabited section. The island then boasted a population of 7,000 whites and 2,000 Chinese and had been leased to the Hudson's Bay Co.

With the opinion the influx of the black race in the form of 600 industrious, law-abiding folk would benefit the colony, James Douglas, the governor, gave the new arrivals a cordial welcome and the assurance they would receive fair and impartial treatment. They settled around what was then Fort Victoria. Some of them later moved to Nanaimo and to Salt Spring Island, 20 miles away.

Finding the color line drawn when they tried to enter various civic bodies, the newcomers appealed to Governor Douglas for permission to express their loyalty and citizenship in a militia company. Thus the Victoria Pioneer Rifle Corps came into being. It included a captain and two lieutenants, with 44 non-commissioned officers and privates, every man a full-blooded negro not long from California. They were instructed by a sergeant of marines from the H.M.S. Swiftsure.

The colored militiamen were armed with flintlock muskets and wore uniforms of blue with white facings and pipe-clayed trappings, topped with the shako head-dress. Uniforms as well as equipment were issued by the Hudson's Bay Co. The men drilled faithfully and earned the reputation of an efficient military unit.

Meanwhile, most of the negro colony had embraced British citizenship, grateful in their freedom as compared with the conditions of slavery then suffered by thousands of kinsfolk in the United States. But the color line was still drawn on Vancouver Island by some of the whites. It is recorded that on one occasion, denied admittance to the opera house, the colored people rushed the place and did some damage to the furnishings.

The negro militia corps paraded regularly until 1864, when, at the welcoming of a new governor, Arthur Kennedy, the authorities refused the unit pemission to form part of the guard. Next day they marched before Governor Kennedy, who diplomatically told them he regretted he had to decline official recognition to the corps. Vancouver Island had become a crown colony and administrative powers of the Hudson's Bay Co. had ceased. After some manoeuvres the corps paraded to the company's headquarters, turned in their arms and passed out of existence.

Interesting to note, the Dominion census of 1931 reported only 533 blacks in all British Columbia.

Camels Again Valuable

Caravans Being Used In Ethiopia By Italian Troops

War in Ethiopia has restored the prestige of the camel. Of recent years camels have been on the bargain counter with few bidders; they reached the nadir of their decline when a string of them divorced from their old jobs by the motor trucks and railroads of modernized Turkey, were paraded about the streets of Istanbul by a publicity agent with advertisements plastered on their humps. In central Australia good riding and harness camels, formerly worth $350, declined to $25 in value. They had been displaced as wool carriers by motor lorries.

Now Italian troops are using camel caravans in Italian Somaliland, one of the bases from which attacks on Ethiopia were planned by the high command. Owners of 100,000 camels used for commercial transport have offered the animals to Emperor Haile Selassie as a patriotic gesture. Even wild camels are being rounded up and put to work.—New York Sun.

Promote Canadian Literature

Would Stimulate Interest In Books And Reading

Organization of the Association of Canadian Bookmen, "to stimulate the rapidly-growing interest in books and reading in the Canadian public," was decided upon at a meeting in Toronto. Authors, librarians, literary critics, publishers and book sellers have agreed to join forces in sponsoring the association.

Promotion of Canadian literature will be a prominent feature of the program, which will be finally formulated at an inaugural meeting planned for January, "but this is by no means an exclusive object," it was announced.

Dr. Pelham Edgar, professor of English at Victoria college, and national president of the Canadian Authors' Association, was elected president of the new organization.

Hens Stolen by Quake?

COBOURG.—Whether or not chicken thieves had a premonition of the recent earthquake, is not apparent, but they managed to stand in pretty well with the powers that caused the disturbance, as several chicken thefts were reported in this locality around the time the 'quake occurred. A local farmer, who heard his hens cackling loudly, attributed it to the tremors, and did not investigate, but when he went out to feed them in the morning he discovered that a large part of his flock was missing.

WE BUY

Hides, Horse Hair and Furs, and pay good prices, also for all farm produce. We are agents for the New York Fur Co.

Indian corn has never been found in a wild state. This may mean either that wild corn was extinct before botanists could make a record of it or that the original wild plant is so different from the cultivated form that it is impossible to recognize it. Corn was found growing as far north as the St. Lawrence valley when the first white explorers arrived in Canada.

NOTICE TO CREDITORS AND CLAIMANTS

MUCH WHISKEY DRUNK BY EARLY CANADIANS

HAMILTON.—Canadians of a century ago were no sissies according to Dr. J. J. Tallman, provincial archivist, in an account of the drinking habits of the year 1832. Dr. Tallman described how at that time there were more taverns in Toronto than there are gasoline stations today. There were forty-two alone between Toronto and Hamilton.

Spruceville

The Spruceville Hall Board are putting on a dance at the hall Friday night November 29. By an oversight this date was not announced in last week's paper.

The Community Social evening as stated last week will be held Friday evening December 6 at the home of Mrs. Proudfoot. There will be a short program, games, and lunch, and it is hoped that as many as can come, will be out and have a good time.

Mr. and Mrs. Parker and children were Edmonton visitors last week, where Mrs. Parker was attending the Municipal Convention.

Mr. and Mrs. English entertained a few of their friends Saturday evening.

Over thirty gathered at Mr. and Mrs. Stout's to celebrate Mr. Stout's seventy-third birthday on Sunday last.

The U. F. W. A. held their regular afternoon meeting at Mrs. Gottschlick's last Wednesday. About a dozen ladies were present and a very pleasant afternoon was spent.

Dr. Locke visited Mr. Heath and has now put his leg into a cast.

Mr. and Mrs. C. C. Burton entertained a few friends last Wednesday.

Little Dicky Bradley had to visit the doctor last week having had his finger badly crushed by a desk.

Mr. and Mrs. Dave Boden entertained Tuesday night.

Mr. Roy Rice had the misfortune to be gassed while grinding feed last week.

Mr. Proudfoot was kicked by a colt last week and has been confined to the house the last few days.

There has been a substantial growth in the membership and the number of clubs in the Canadian Boys' and Girls Farm Clubs since 1931. In that year the number of clubs was 1,215 and the membership 21,142. Now there are 1,900 clubs with a total membership of 30,282.
